

Feel the benefit

of impartial
energy advice

Feel the benefit of a warmer home, save money on your energy bills and help tackle climate change.

**GREATER
MANCHESTER**
DOING THINGS DIFFERENTLY FOR THE ENVIRONMENT

Making your home more energy-efficient can make it warmer, lower your energy bills, and contribute to making Greater Manchester a greener, fairer place to live.

Heating homes and heat loss from draughty and poorly insulated homes has a big impact on the environment, contributing to the UK's carbon emissions. To help fight climate change, we all need to make our homes more efficient. This might mean improving insulation in the attic and walls, getting better windows, using low-carbon heating, and making other home upgrades.

Greater Manchester Combined Authority and its partners are here to help you make these changes. They offer personalised advice to help you understand what improvements your home might need. They can also identify if you qualify for free or discounted upgrades, based on your situation.

You could even qualify to have insulation, a heat pump and solar panels added to your home completely free.

Check if you qualify for funding.
