Burial in the Garden of Remembrance

Please note that the Council will endeavour to bury the Cremated Remains in the specific area of previous cremations when requested, but no guarantee can be given as to the exact location except the general area used for the burial at that time. The crematorium grounds are a shared memorial area. The placing/planting of plants, trees, shrubs, crosses, vases or other forms of unauthorised memorial cannot be permitted and under no circumstances should anything be attached to any memorial or trees/ shrubs in these areas. Any such items may be removed without notice.

Any applicant who finds the above arrangements unsatisfactory should arrange for the remains to be removed for private disposal.

I hereby authorise the Manager of Altrincham Crematorium to inter the cremated remains of the deceased named above in the Gardens of Remembrance at Altrincham Crematorium.

Please give details of location for remains to be buried.....

Witnessed/Unwitnessed (A charge is made to witness the interment of cremated remains)

CONSENT FOR THE DISPOSAL OF ORTHOPAEDIC IMPLANTS & METAL RESIDUES

Name of Deceased

Environmental Policy:

Until recently it was accepted practice to take the implant from the remains and place it with other implants until there was a sufficient amount of metal to dispose of it all in the grounds of the crematorium. The metals used for implants are special medical grade stainless steel, titanium and cobalt chrome all produced from non-renewable resources. If we do not recycle these metals then they will become depleted and less will be available in the future. By recycling the implants from the cremations at Altrincham Crematorium we can lessen the impact on the non-renewable resources for use of these recycled metals to other industries. Other metals recovered consist of ferrous metals, which are predominantly staples and nails used in coffin construction. An element of precious metal is recovered from the afore-mentioned metals which emanates from jewellery. Precious metals melt during the cremation process and will reduce to a granular form therefore it is not generally recoverable from cremated remains; it is highly recommended that all jewellery is removed by the family prior to arranging the funeral.

All metals remaining following cremation will be disposed of in the most suitable manner to reduce the impact to our environment. This will include the sensitive recycling of orthopaedic implants and metal residues to avoid the usage of non-renewable resources and comply with existing legislation. After cremation any metals present will be removed from the cremated remains and held at the crematorium. Periodically, all metal so recovered will be collected and taken to a central point within the UK for recycling. Remondis UK Ltd will carry out the collection and recycling of metals on a non-commercial, open accounting basis.

All surplus monies derived from the recycling scheme will be distributed amongst selected Charities with confirmation from such charities posted the crematorium webpage www.trafford.gov.uk Should you wish to dispose of the metals in any other way then please indicate by ticking the box below and metals will be returned to you with the cremated remains.

TICK ONLY IF YOU REQUIRE ALL METAL RESIDUES TO BE RETURNED TO YOU

NB Please note that soft metals (e.g. gold and silver) melt into tiny globules and combine with the cremated remains. These are not identifiable and can be dispersed within cremation equipment and the cremated remains and cannot be returned separately. We recommend that precious metals in the form of jewellery are retained by the applicant for cremation and not cremated with the deceased.

I (Name of Applicant for cremation)

Hereby accept the above conditions regarding the environmentally sensitive disposal of metals following cremation.
