

Warburton

Neighbourhood Development Plan (NDP)

2025 - 2039

Warburton Parish Council
October 2025

Mission Statement for the Warburton NDP

To continuously develop and evolve a welcoming, safe and sustainable environment for all stakeholders (residents, visitors, farmers, Trafford) where history is celebrated, the landscape is treasured, and the community is vibrant.

1.0 What is a Neighbourhood Development Plan?

- 1.1 Neighbourhood Development Plans (NDPs) were introduced through the Localism Act 2011 to give local people a greater say in planning decisions that affect their area. NDPs are neighbourhood level planning policy documents with policies designed to reflect the needs and priorities of local communities.
- 1.2 NDPs can identify where development should take place, set out local design principles so that buildings respond positively to local character, and protect important facilities, historic buildings, the natural environment and open spaces. They are an important part of our planning system because planning applications are determined in accordance with the development plan unless material considerations indicate otherwise. Made (adopted) NDPs are part of the local statutory development plan for their area.
- 1.3 An NDP can cover a range of planning related issues or just have one, single policy. The Vision Statement and Key Planning Issues consultation explored whether the various local planning issues identified by the Neighbourhood Plan Steering Group were supported by local residents and stakeholders. The consultation responses were used to inform the first Draft Plan. The report ‘Qualitative assessment of Feedback from Warburton NPD consultation with residents in December 2021’ is available on the website <https://www.warburtonparishcouncil.org/neighbourhood-plan>.
- 1.4 It is important to remember that NDPs cannot be prepared in isolation. They have to be ‘in general conformity’ with strategic planning policies - in this case, the strategic policies in the [Places for Everyone Joint Development Plan Document for Bolton, Bury, Manchester, Oldham, Rochdale, Salford, Tameside, Trafford And Wigan 2022 to 2039 Adopted 21 March 2024](#) (known as ‘PFE’) which apply to Trafford. Appendix A: Replaced District Local Plan Policies Table A.8 Replaced Trafford Local Plan Policies sets out which of the Trafford Core Strategy (2012) Policies have been replaced by PFE policies. [Trafford Local Plan: Core Strategy, Adopted January 2012](#) and saved policies from the [Revised Trafford Unitary Development Plan Adopted Plan, June 2006](#) also make up the current Trafford Local Plan. Most of the UDP policies are no longer operational as they have been superseded by other Local Plan documents including the Core Strategy. Consideration of the compliance of the local plan policies with the revised National Planning Policy Framework (February 2019) was published in 2019¹. The Policies Maps in Appendix 2 identify the strategic planning policies and context relevant to the Warburton neighbourhood area.
- 1.5 In line with good practice (see Planning Practice Guidance – [‘Can a neighbourhood plan come forward before an up-to-date local plan or spatial development strategy is in place?’](#)) the Warburton NDP has also been prepared taking into account the reasoning and evidence informing the local plan process for the new [Trafford Local Plan up to 2037, February 2021](#) (Regulation 18 Consultation Draft).

¹ [A Review of Local Development Plan Policies](#)

- 1.6 NDP Policies also have to 'have regard to' national planning policy, as set out in the [National Planning Policy Framework \(NPPF\)](#) and other National Planning Practice Guidance, Ministerial Statements and Government advice. The most recent NPPF was published on 12th December 2024, but paragraph 239 advises '*For neighbourhood plans, the policies in this Framework will apply for the purpose of preparing neighbourhood plans from 12 March 2025 unless a neighbourhood plan proposal has been submitted to the local planning authority under Regulation 15 of the Neighbourhood Planning (General) Regulations 2012 (as amended) on or before the 12 March 2025.*' Therefore, Warburton NDP has been prepared to have regard to the previous NPPF 20th December 2023.
- 1.7 All the Neighbourhood Development Plan planning policies have to be underpinned by a clear and robust evidence base of technical resources and be informed by the responses to public consultations. Overall, the Plan has to meet a set of 'basic conditions' set out in national guidance (including being in general conformity with strategic policies and having regard to national policies as set out above).
- 1.8 Preparing an NDP is a complex and lengthy process and is set out in Government regulations: the [Neighbourhood Planning \(General\) Regulations 2012](#) (as amended). This process is set out in Figure 1.
- 1.9 This is the final, referendum version of Warburton Neighbourhood Development Plan (WNDP). The Plan was examined by an independent examiner in summer 2025. The examiner concluded that subject to the policy modifications set out in his report, the Plan meets the Basic Conditions and should proceed to a referendum. The referendum plan has been amended in line with the examiner's recommended changes.
- 1.10 If there is a majority Yes vote (50% of turnout + 1), the Plan will be made (adopted) by Trafford Council and used to help determine planning applications alongside Trafford Council's planning policies.

Figure 1: NDP Process

2.0 An NDP for Warburton

First Steps

- 2.1 Warburton Parish Council made the decision in 2019 to prepare an NDP. Warburton Parish was designated as a neighbourhood area by Trafford Council on 4th March 2019. Map 1 shows the extent of the Parish and designated area. The NDP can only include planning policies to guide development within this boundary.
- 2.2 An NDP Launch Meeting was held on 9th May 2019 at 7.30 pm at the Warburton Parish Rooms and was promoted to local residents through a leaflet delivered to households in the parish.
- 2.3 An NDP Steering Group of parish councillors and interested local residents was set up and planning consultants Kirkwells were appointed to provide professional town planning consultancy advice.
- 2.4 Early on the group prepared a background document describing the historic landscape significance of Warburton Park, commissioned a habitats survey and reviewed policies and proposals in the new Trafford Local Plan and PFE strategic plan and relevant local technical evidence to support these higher-level documents. These various ‘evidence base’ documents are provided on the WNDP pages of the Parish Council website <https://www.warburtonparishcouncil.org/neighbourhood-plan>

Public Consultation on the Vision Statement and Key Planning Issues, 1st December until 31st December 2021

- 2.5 A short Vision Statement and Key Planning Issues document was prepared by the WNDP Steering Group in the Autumn of 2021 setting out the group’s proposed draft vision and objectives and the key planning themes or issues identified so far. The document included a questionnaire and was published for local informal consultation in December 2021.

Warburton Masterplan & Design Guide

- 2.6 In 2021 the Parish Council accessed the Locality neighbourhood planning technical support programme to appoint independent consultants AECOM to prepare a finer grained masterplan focusing on that part of the then proposed strategic site JPA33 New Carrington within the neighbourhood area in the north of the Parish at Warburton Lane.
- 2.7 The aim was to provide more detailed layouts and designs which would respond to the important natural and built heritage assets in the Parish and provide a sensitive transition from the rural area in the south and east of the Parish to the built-up area where major development is proposed. The document also includes a design guide with design principles for both the part of the proposed strategic site within the neighbourhood plan area and other parts of the parish.

Informal Consultation on the Emerging Draft Neighbourhood Plan and Warburton Draft Masterplan & Design Guide, June 2023

- 2.8 The emerging Draft Neighbourhood Plan was published for informal consultation over 3 weeks in June 2023. At the same time the draft Warburton Masterplan & Design Guide was published on the neighbourhood plan page of the Parish Council's website and comments were invited. An open drop-in event was held on Saturday 17th June from 2pm to 4pm in the Parish Rooms and residents were provided with a summary document and questionnaire. The full version of the Draft Plan and other background documents were also provided on the Parish Council's website.

Warburton Archaeological and Historic Buildings Assessment Overview

- 2.9 An Archaeological and Historic Buildings Assessment has been prepared to underpin and inform the policies and proposals in the WNDP. This report is published as a background evidence base document on the WNDP pages of the Parish Council website and summarises the significant historic landscape and built heritage assets (designated and non-designated) in the Warburton neighbourhood area. It was updated following the Regulation 14 consultation.

Regulation 14 Consultation

- 2.10 The Draft Plan was published for formal consultation for nearly 8 weeks from Monday 8th July 2024 until 5pm Saturday 31st August 2024. A leaflet and response form were delivered to households in the Parish and all the documents were available to view and download from the WNDP pages of the Parish Council website or by using a QR code.

Submission

- 2.11 WNDP was submitted to Trafford Council on 28th February 2025. The Submission version of the WNDP contained amendments to policies and supporting text made in response to comments submitted during the formal consultation period.

Regulation 16 Consultation

- 2.12 The Regulation 16 consultation ran from 15th April 2025 to 3rd June 2025. Responses were received from 77 parties. In common with the consultation at the Regulation 14 stage, these were received from Trafford Council, statutory consultees, Stantec on behalf of Redrow Homes, residents and other local stakeholders.

Examination

- 2.13 WNDP was examined over the summer of 2025. Prior to the examination commencing a map error was identified relating to one of the proposed Local Green Spaces, 'Part of Coroner's Wood, Warburton'. The examiner subsequently advised that it was necessary to conduct a further focused public consultation during the examination on the correct boundary. This consultation was undertaken over a four-week period between 11th August 2025 and 9th September 2025. Seven responses were received, including one from Stantec on behalf of Redrow Homes and one from Trafford Council.
- 2.14 The examiner made recommendations to modify a number of policies and text to ensure the Plan meets the Basic Conditions and other legal requirements. These modifications have been made to the final, referendum plan. The Report on the Warburton Neighbourhood Development Plan 2025 – 2039 [\(insert hyperlink\)](#) is published on the neighbourhood plan page of the Parish Council's website.

Strategic Planning Issues

- 2.15 Most Warbuton Parish is washed over by the Green Belt.
- 2.16 There are several major development and transport proposals which could have significant implications for the future of the Parish. The WNDP must not conflict with strategic policies within the Development Plan and the Parish Council is committed to remaining involved in these higher-level planning processes and to ensuring the WNDP provides a local planning framework which adds value, information and detail to inform planning decisions.
- 2.17 In summary these proposals are:
- Places for Everyone Policy JP-Strat11: New Carrington with Policy JP Allocation 30 New Carrington propose 5,000 residential units at Carrington / Partington and Sale West, around 350,000 sqm (gross) of employment

opportunities for B2 / B8 uses and a new local centre. An area of the Parish to the north lies within this strategic allocation and the proposal includes a new Green Belt boundary and development of approximately 400 residential units in the Warburton Lane area. Development of the site will be required to be in accordance with a masterplan that has been developed in consultation with the local community and approved by the local planning authority. The masterplan must include a phasing and delivery strategy, as required by policy JP-D1. Central to the masterplan shall be the consideration of opportunities to restore habitats, strengthen ecological networks, and manage the carbon and hydrological implications of development, having regard to the presence of peat on parts of the site.

- Emerging new Trafford Local Plan Policy TP6 – Carrington and Partington sets out that new development will have a transformational impact on the area and provide enhanced services and facilities to the existing communities, reducing isolation through new transport and social infrastructure and improved access to green spaces. Policy AF7 – New Carrington identifies an Area of Focus to reflect the anticipated development in this location.
- The route of HS2 (Phase 2B) bisects the parish south to northwest and proposes a new viaduct over the Manchester Ship Canal to connect with stations along the existing railway including Wigan, Preston, Lancaster, Oxenholme, Penrith, Carlisle, Lockerbie, Motherwell, Glasgow and Edinburgh. In October 2023 this section of HS2 was cancelled.

2.18 Trafford emerging new Local Plan Policy TP12 – Rural communities sets out in part a) that *‘Warburton, Dunham, Dunham Woodhouses and other rural communities will be protected from inappropriate development, their character, appearance and amenity enhanced, and the range of facilities within these settlements to be sufficient to maintain their long-term sustainability.’*

2.19 Warburton NDP has been prepared in the context of these national and strategic policies and proposals.

3.0 A Portrait of Warburton

Parish Rooms and 'new' St Werburgh church

- 3.1 The Parish of Warburton lies about 4 miles west of Altrincham and 15 miles southwest of Manchester within the local authority area of Trafford Council. There were around 340 residents in 2021 (Census 2021)².
- 3.2 The Parish is bounded by Partington to the north and the Manchester Ship Canal to the west. Although the area is geographically close to the national motorway network (the M60, M56, M6 and M62 form a ring around the wider area) the local road network comprises winding rural lanes with a small toll bridge over the old Mersey watercourse and a larger, raised bridge over the Manchester ship canal. These physical constraints add to the area's relative sense of isolation. The National Trust property of Dunham Massey estate lies nearby to the southeast.
- 3.3 The parish has a low lying, rural character and includes a number of working farms. There are several areas of woodland (including ancient woodland) and some traditional orchards. The boundaries of the Parish are delineated by the water courses of Red Brook to the north and the River Bollin to the south. The Manchester Ship Canal forms the boundary to the west and part of the old course of the River Mersey lies to the north and west of the village. There are also numerous ponds, many probably dating from medieval times. Most of the area, apart from an area to the north near Partington, is washed over by the Green Belt.
- 3.4 There is evidence that a large area of the northwest of the parish around Warburton Park was occupied by a medieval deer park, believed to date from the 1200s. This is a significant heritage asset with potential for further archaeological interest.
- 3.5 Development is concentrated in the village of Warburton and the smaller settlement of Mossbrow. There are two churches. The old church of St Werburgh dates from Saxon times and is located close to the toll bridge. The newer church of St Werburgh is on Bent Lane, about half a mile from the medieval church and includes the Parish Room. The Saracen's Head public house is located just outside the village on Paddock Lane.

² <https://www.ons.gov.uk/visualisations/customprofiles/build/>

- 3.6 There are 22 listed buildings including the Grade I Old Church of Saint Werburgh and a Conservation Area in Warburton village. A Local List of Heritage Assets, constituting non designated heritage assets (NdHAs) is in the process of being adopted by Trafford Council.

Old Church of St Werburgh

- 3.7 The area has several PROWs (public rights of way) including a section of the Trans-Pennine Trail to the south of the parish, public footpaths crisscross the landscape and there is a path along the Manchester Ship Canal. The parish provides opportunities for walking and cycling for local residents as well as for visitors from nearby built-up areas.
- 3.8 The nearest rail stations are at Cadishead to the north and Altrincham to the east, both with services to Manchester, and there is a bus service to Lymm. The rural road network is frequently under pressure from the high volumes of fast-moving traffic as motorists use the area as a cut through to Lymm and the motorway network. Local traffic issues are exacerbated further during periods when motorways are closed or congested. Vehicular traffic can cause conflict with pedestrians and cyclists and has an impact on the tranquility of the area.

4.0 Vision and Objectives

- 4.1 The Draft Vision and Objectives were largely supported in the informal public consultation in December 2021.
- 4.2 The responses also included concerns about wildlife (especially birds), loss of hedgerows and concerns about road safety and impacts of traffic on pedestrians and cyclists.
- 4.3 The Vision and Objectives were amended slightly to address these comments and further updated following consideration of the responses to the Regulation 14 public consultation.

NDP Vision

By 2039 Warburton Village and Parish will:

- **Be a desirable place where people would like to live, having a strong sense of identity, tradition and community where visitors are welcomed to enjoy the history and landscape.**
- **Be well known for celebrating the history and landscape as well as providing good residential infrastructure for the community.**
- **Become a sustainable community within the local landscape, actively contributing to the environmental wellbeing of the adjacent conurbations with a proactive approach to the Green Belt.**
- **Provide a network of safe footpaths and cycle routes to encourage recreational activity and promote wellbeing.**
- **Maintain good communications with the community to ensure needs are met.**
- **Have well maintained infrastructure including village amenities, roads, footpaths, utilities, digital connectivity and transport links.**
- **Have a thriving farming community that is integral to the village community and actively contributes to sustainability and wellbeing.**
- **Support local business to provide employment and facilities such as farm shops, recreation and services.**

NDP Objectives

Overall Objective: To provide a positive, locally led planning framework which provides detail and adds value to strategic policies for proposals within the Warburton neighbourhood plan area.

(See all policies)

Objective 1: To enhance and promote the distinctive landscape, buildings and heritage assets of the Parish, ensuring that any development is sympathetic, sensitively designed and high quality, responds to local character and respects the Village Design Statement.

See NDP Policies:

- W1 Conserving and Enhancing Local Landscape Character
- W2 Warburton Deer Park
- W3 Protecting and Enhancing Wildlife
- W4 Warburton Moss
- W5 Responding to Local Character
- W6 Protecting Designated Heritage Assets
- W7 Non designated Heritage Assets
- W8 Warburton Conservation Area
- W9 Archaeology.

Objective 2: To develop green credentials and promote conservation, allowing wildlife to flourish in woods, hedgerows, fields and watercourses.

See NDP Policies:

- W1 Conserving and Enhancing Local Landscape Character
- W3 Protecting and Enhancing Wildlife
- W4 Warburton Moss.

Objective 3: To encourage the further development of Green Infrastructure throughout the Parish, linking up to neighbouring Parishes where possible and further developing the informal recreational facilities of the Parish.

See NDP Policies:

- W3 Protecting and Enhancing Wildlife
- W4 Warburton Moss
- W11 Walking and Cycling
- W12 Local Green Space.

Objective 4: To promote the legacy/history of the village and its setting as social capital, publicising its importance so that it becomes more widely known.

See NDP Policies:

- W2 Warburton Deer Park
- W4 Warburton Moss
- W6 Protecting Designated Heritage Assets
- W7 Non designated Heritage Assets

- W8 Warburton Conservation Area
- W9 Archaeology
- W11 Walking and Cycling.

Objective 5: To encourage safe and sustainable transport and improve opportunities for walking and cycling.

See NDP Policy W11 Walking and Cycling.

Objective 6: To maintain a diverse, cohesive, safe and healthy local community, maintaining the character and vitality of the Parish.

See NDP Policies:

- W11 Walking and Cycling
- W12 Local Green Space
- W15 Community Facilities.

Objective 7: To plan for local infrastructure and digital connectivity improvements and their enhanced resilience which meet the existing and future requirements of residents and respects the local landscape.

See NDP Policy W14 Energy Proposals.

Objective 8: To integrate farmers and agriculture in the broader community through supporting diversification / more sustainable land use and encouraging local production and consumption.

See NDP Policies:

- W13 Rural Diversification
- W14 Energy Proposals.

Objective 9: To ensure a greener and sustainable future by maximising energy, water and resource efficiency, creating a low-carbon and climate change resilient neighbourhood.

See NDP Policies:

- W4 Warburton Moss
- W10 Sustainable Design and Climate Change
- W13 Rural Diversification
- W14 Energy Proposals.

Parish Council Actions and Community Aspirations

- 4.4 The Parish Council is aware that there are a number of important local concerns which have been raised in public consultations, and which cannot be addressed through planning policies in the WNDP. These are complementary to the Plan and actions to address them will also contribute towards the Vision and Objectives.
- 4.5 The actions identified for the Parish Council in partnership with other organisations are set out in Appendix 1: Parish Council Actions and Local Aspirations.

5.0 Planning Policies

- 5.0.1 The following sections set out the planning policies for Warburton Neighbourhood Plan Area and Parish and these will be used to help determine planning applications for development. The evidence and rationale behind each Policy are set out in the supporting text.
- 5.0.2 The policies are necessarily wide ranging in their scope and taken together, should help to deliver the future development within the Parish which is both sustainable and appropriate.

Manchester Ship Canal

5.1 Conserving and Enhancing Warburton’s Natural Environment

Bottom of Wigsey Lane Path at Bollin Point

Landscape Character

- 5.1.1 Warburton has a very distinctive local landscape character. This is described in several landscape character area assessments and reports.
- 5.1.2 At a national level, the parish lies within [National Character Area 60: Mersey Valley](#) which is a low-lying river valley of the River Mersey characterised by arable farmland, lying close to the Manchester conurbation to the east.
- 5.1.3 At a strategic, Greater Manchester level, the [Greater Manchester Landscape Character and Sensitivity Assessment, 2018](#) identifies 10 Landscape Character Types (LCTs). Warburton lies within 'Mosslands and lowland farmland'. The study then goes to identify 46 component Landscape Character Areas (LCAs) and Warburton is identified as LCA 44: Warburton and Carrington Mosses. The LCAs describes the landscape character of the area:
- ‘This is a rural landscape and one which provides an important sense of separation between distinct settlements and urban areas. In the lowland farmland areas there is a mixture of pasture and arable cultivation, and field boundaries tend to be defined by gappy hedgerows or post and wire fencing. In the mosslands, productive peaty soils have led to there being large arable fields, defined by drainage ditches and reinforced with geometric moss woodlands.’*
- 5.1.4 Guidance and opportunities are set out to help protect the landscape character from inappropriate development.
- 5.1.5 Trafford Council’s [Landscape Strategy SPG, September 2004](#) identifies seven landscape types in Trafford, with parts of Warburton falling within Settled Sandlands and River Meadowlands.

- 5.1.6 The Settled Sandlands consists of three subdivisions, which display the general characteristics but have subtle differences and the following are identified in the WNDP area:

i) Warburton Park Farm/Mossland Fringe

This area has a number of marl pit ponds which are characteristic to this area and which were used to improve the fertility of the surrounding fields. There are isolated pockets of remnant coverts and woods, most of which provide a valuable range of woodland and wetland habitats, essential for wildlife diversity. Some of these woodlands are linear, as they are associated with Red Brook and Sinderland Brook. Coroners Wood, an Ancient Woodland along Red Brook, provides a visual boundary between the built up area of Partington and the rural areas around Warburton.

ii) Warburton

Fields are generally smaller with more irregular boundaries. There are several ponds throughout the area that provide ecological diversity, some perhaps coincide with the location of the former Warburton moss. The ponds were used in conjunction with the drainage ditches found in the area to assist in the control of water levels.'

- 5.1.7 River Meadowlands describes two areas within the Borough, both of which cover areas of Warburton Parish - the western sections of the River Mersey in the north and the River Bollin in the south. These two areas demonstrate similar characteristics, albeit that the Mersey Valley is larger than the Bollin and is located within a more urban context:

'Bollin Valley - Agricultural areas adjacent to the Bollin floodplain, are predominantly pasture, but also include arable and rough grassland. Field boundaries comprise a mixture of hedgerows and most often post and wire fences. Many hedgerows are overgrown or remnant, with isolated and scattered hedgerow trees, particularly adjacent to the river. Where post and wire fences occur these increase the visually open aspect and apparent scale of the field areas. Adjacent to the Dunham Estate the landscape assumes a more managed appearance, with pristine post and rail fences and recent Avenue planting emphasising the main pedestrian routes to and from the Park.

'Mersey Valley – Land use in the Mersey floodplain is more mixed than that of the Bollin. Much of the pasture is used for horse grazing, with only a small amount of land now used for arable farming. Few field boundaries remain most comprising post and wire fencing to those fields used for horses. This allows extensive views along the river corridor, with recent planting and changes to topography (often from landfill operations) being the main obstacle to distant views. Recreational uses have become more widespread to the east of the meadowlands with very little access to the west. There are a number of features such as ox-bows created by the River Mersey, which are important in terms of their geomorphologic and ecological value.'

- 5.1.8 The Landscape Character Assessment for Warburton prepared by the WNDP Steering Group is based on the Trafford Landscape Character Types. The Warburton

Landscape Character Assessment splits these Character Types into eight further local Landscape Areas – see Map 2.

- 5.1.9 There are recommendations for the management of the landscape for each of the landscape areas and these have been used to inform Warburton NDP Policy W1 Conserving and Enhancing Local Landscape Character.

Community Consultation

- 5.1.10 The responses to the Vision document showed that residents supported the approach in the WNDP to conserving and enhancing local landscape character and wildlife and there were concerns about loss of habitat including hedgerows. The informal consultation on the emerging draft plan also showed overwhelming support: 98% of respondents supported the draft policy and there were concerns about loss of Green Belt and the need to protect important local assets which contribute to landscape character.
- 5.1.11 Development opportunities will be limited in the Green Belt in line with national and strategic planning policies, but part of the Parish to the north is included in the strategic allocation identified as JPA 30 New Carrington. Wherever possible development in the Parish should respond positively to the local landscape character and support opportunities to enhance Green Infrastructure. WNDP Policy W1 sets out how development proposals in Warburton should respond to local landscape character and take opportunities to design landscaping schemes which are appropriate and sensitive to the local context.
- 5.1.12 Important views have been identified through the consultation process and their significance is considered in the Warburton Design Guidance and Codes.
- 5.1.13 Policy W1 was amended in response to comments submitted during the Regulation 14 consultation. This included the need to clarify the key views identified in (the former) Warburton Design Guide and adding a clause from former Policy W10 Warburton Masterplan (now deleted) relating to the requirement for a suitable landscape buffer. Development in the PfE Policy JPA 30 New Carrington allocation will introduce new built form close to a very sensitive area. There is a need to establish a new Green Belt boundary to replace the previous Red Brook woodland boundary which provided the limit to development in the former Trafford Local Plan Core Strategy. Given the flat nature of the land to the south, the housing will be visible from a considerable distance away. A 30m planted boundary on the southern and eastern boundaries of the development sites would be the minimum requirement to achieve the necessary screening to retain the visual and physical boundaries to the Green Belt.

Policy W1 Conserving and Enhancing Local Landscape Character

Policy W1 Conserving and Enhancing Local Landscape Character

Development proposals shall have regard to the design principles for Landscape and Views set out in Part 3.3 of the Warburton Design Guidance and Codes (Appendix 4 of Warburton Neighbourhood Development Plan). These are:

- Future development shall aim to protect and enhance the key characteristics of the Landscape character areas that it falls within; and
- Any development within the key view corridors (as identified in Figure 2 of the WNDP and Figure 12 in the Warburton Design Guidance and Codes) shall be sympathetic to the character and appearance of the landscape. Where proposals could impact on views, design responses such as lower building heights or screening using vegetation can be used to reduce the visual impact of development on the landscape.

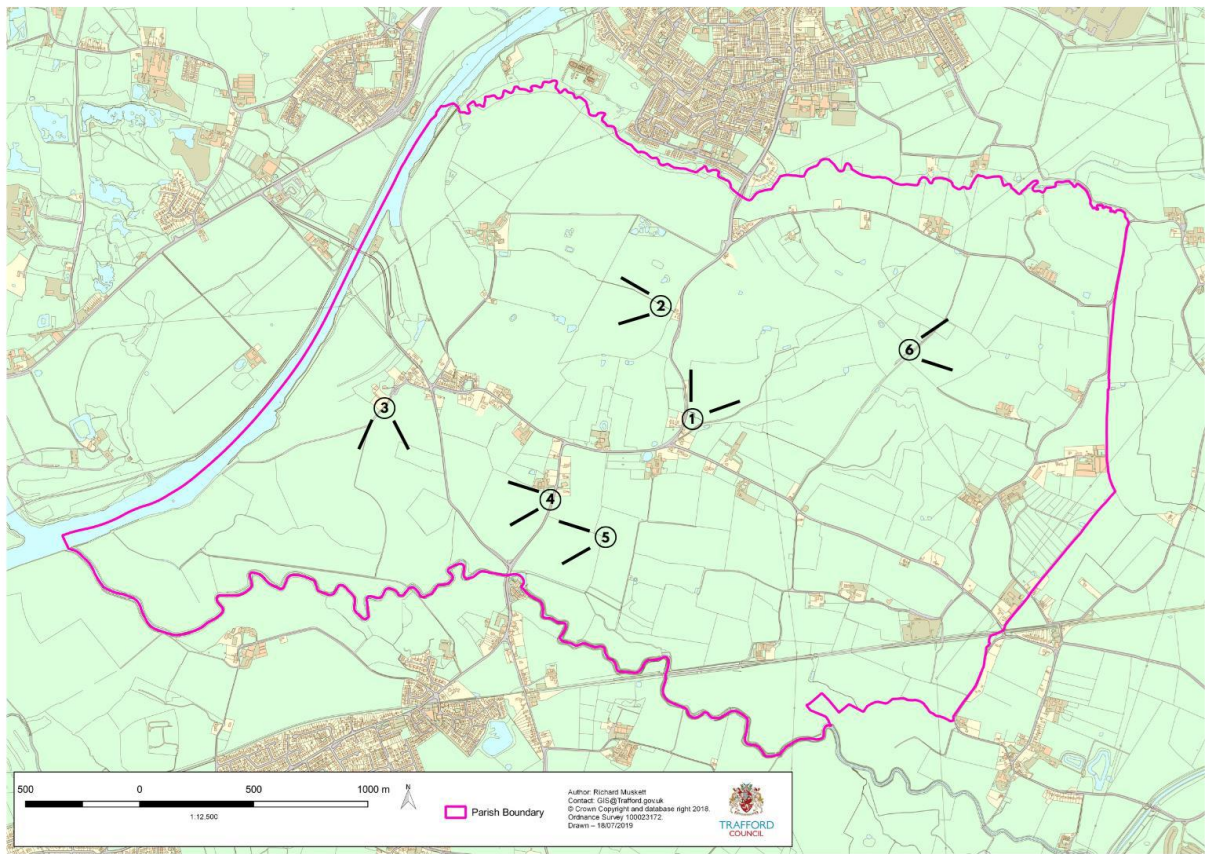

Development proposals shall recognise and respond positively to the intrinsic local landscape character of the Warburton neighbourhood plan area as identified and described in Section 3.3.1 of the Warburton Design Guidance and Codes. Landscaping schemes shall be sympathetic and appropriate to the relevant Landscape Character Type as identified in the Landscape Character assessment for Warburton (see Map 2).

1. In the Mersey Meadowlands Landscape Area, schemes shall encourage long term habitat and conservation management in areas of woodland, grassland, ponds and floodplain grazing marsh.
2. In the Bollin Valley Landscape Area schemes shall include new hedgerow planting and consider opportunities to provide linkages to footpaths associated with the river.
3. In the Long Ridge Landscape Area, schemes shall include new hedgerow planting and consider opportunities to provide linkages to footpaths to other areas.
4. In the Warburton Park Landscape Area, schemes shall include new hedgerow and tree planting especially to the perimeters of the former deer park and protect and enhance the ponds and copses around them.

- 5. In the Townfield Landscape Area schemes shall preserve existing historic hedges and incorporate new hedgerow and tree planting, particularly to the perimeter of the area.**
- 6. In the Warburton Moss Landscape Area schemes shall protect water levels and support higher water levels in less productive areas to promote greater habitat diversity and wildlife value. Proposals for built development and recreational uses shall respect and not conflict with the existing quiet and tranquil character of the mosses. Schemes which contribute to the management of Moss Wood to diversify habitat for wildlife will be encouraged. Overall, the basic landscape structure of the mossland fields and ditches shall be protected and where possible improved to support a greater diversity of native flora in the ditches (see also Warburton NDP Policy W4 Warburton Moss).**
- 7. In the Red Brook Valley Landscape Area development shall protect Coroner’s Wood (an area of ancient woodland and a Site of Biological Importance) and existing hedgerows.**
- 8. In the Warburton Village Landscape Area schemes in the Conservation Area shall have regard to WNDP Policy W8 Warburton Conservation Area.**

Development in the PfE Policy JPA 30 New Carrington allocation must include a substantial landscape buffer along the southern boundary of the Warburton Lane parcels to separate built development from the area to the south and to soften the transition to the rural area and historic landscape. A substantial belt of woodland, marking the southern and eastern boundaries of the development sites is also required. This landscape buffer shall be designed to screen the housing development at Warburton Lane and to avoid visual impacts on the former deer park from the housing.

Map 2: Warburton Landscape Character Types and Areas

Warburton Deer Park

View across the former Deer Park from public footpath

- 5.1.14 The Warburton Park Landscape Area was occupied by a medieval deer park. Deer Parks became popular after the Norman conquest and were used primarily for hunting and to provide food, fuel and building materials.
- 5.1.15 The evidence to support the Deer Park is set out in the Historic Environment Assessment (HEA)³ and summarised in the background document Warburton Archaeological & Historic Buildings Assessment Overview⁴. It is thought that Sir Geoffrey de Dutton 2nd created the deer park between 1248 and 1278 and disemparkment occurred in the 17th century, with the former park land retained as a single tenancy.
- 5.1.16 The border of the deer park is reflected in modern landscape boundaries and Warburton Park Farm (a moated manor site with a Grade II Listed 17th century farm building) is thought to have been the medieval manor site. The boundary can be identified with some confidence. It includes an earthwork along the south side extending for around 350m, and a northern boundary following Red Brook, where a substantial bank with a southern slope leading down towards Red Brook possibly represents the above ground remains of a park pale. The boundary is shown on Map 3.

³ GMSF Land Allocations, Trafford GMA45 New Carrington Appendix 2 (Archaeological Resource) Report No 2020/4

⁴ See <https://www.warburtonparishcouncil.org/neighbourhood-plan>

- 5.1.17 The identified boundary is considered to be a more accurate representation than the projected boundary identified in the Historic Environment Assessment Headline Report GMSF Land Allocations, Trafford GMA45 New Carrington, Plate 3 Map showing possible archaeology and historic landscape assets related to Warburton medieval deer park (the projected park boundary is shown as a dashed line). This is because the Salford University study of the deer park (used in the HEAH Report) did not cover the full extent of the deer park.
- 5.1.18 Under The Hedgerow Regulations 1997 very many hedges in Warburton would be considered as ‘Important’. Many have archaeological or historic value, and all have wildlife and landscape value. These hedges are predominantly along roadsides, but additionally define historic assets within the landscape, such as the perimeter of the former Deer Park, the ‘radial’ hedges of the mossland and the hedge delineating half a medieval ‘strip’ in the Townfield area.
- 5.1.19 Onion Farm has a Tudor wall painting and a probable chapel of ease which may date back to c. 1150, as well as post-medieval graffiti. It is Listed Grade II. It was very probably the original park lodge where the steward would have lived (possibly hence the wall painting). It matches description of other deer park lodges and is located adjacent to Dunham Road / Paddock Lane, which pre-date Warburton Lane.
- 5.1.20 The [New Carrington GMSF Masterplan, 2020](#) prepared for Trafford Council by AECOM notes in the Summary of proposed New Carrington Heritage Asset Considerations (p23) that development should ‘*provide a landscape buffer to Warburton Deer Park to separate development from the area and reduce the density of development*’. However, the indicative masterplan includes three parcels of land for identified for residential development to the west of Warburton Lane and within the boundary of the Deer Park. The area of the proposed development within the Deer Park (part of New Carrington) may also be a possible location of Romano-British occupation, known to exist on similar assets locally, which would not necessarily show up with LIDAR, GPR etc but is nevertheless important.
- 5.1.21 The Deer Park includes various relict assets such as a park pale boundary (bank and possible ditch), fishponds, a possible moated pillow mound (rabbit warren) mill site and leat system. The park boundary holds evidence for possible salters (deer traps) and an entrance. One of the most important assets is the close association with the woodland (including the part scheduled as ancient woodland) at Coroner’s Wood. The association is important as many species now within the woodland were once within the park. Almost the whole of the northern boundary of the Deer Park has been the subject of substantial medieval engineering, comprising of the re-profiling or ‘scarping’ of the south bank of the Red Brook valley, now part of Coroner’s Wood.
- 5.1.22 Due to the agricultural use of the landscape and lack of development, there is potential for Prehistoric/Romano-British remains to survive, particularly close to Red Brook and good potential for buried archaeological remains of the Medieval Deer Park to survive. Warburton Deer Park forms the setting to several designated heritage assets and contains numerous non-designated heritage assets within the identified boundary and on the edge or just outside. They are rare assets, particularly within the northwest, and their significance is increased due to their group value and association. The HEA considers that if confirmed through further, more detailed

assessment and survey the best-preserved elements of the deer park are likely to be worthy of Scheduled Monument status of surviving elements of deer parks across England. The assets of the deer park are identified as Non-designated Heritage Assets with several features included on Trafford Council's Local List of Heritage Assets (see Appendix 3 and HER record at <https://gmaas.salford.ac.uk/historic-environment-record/>).

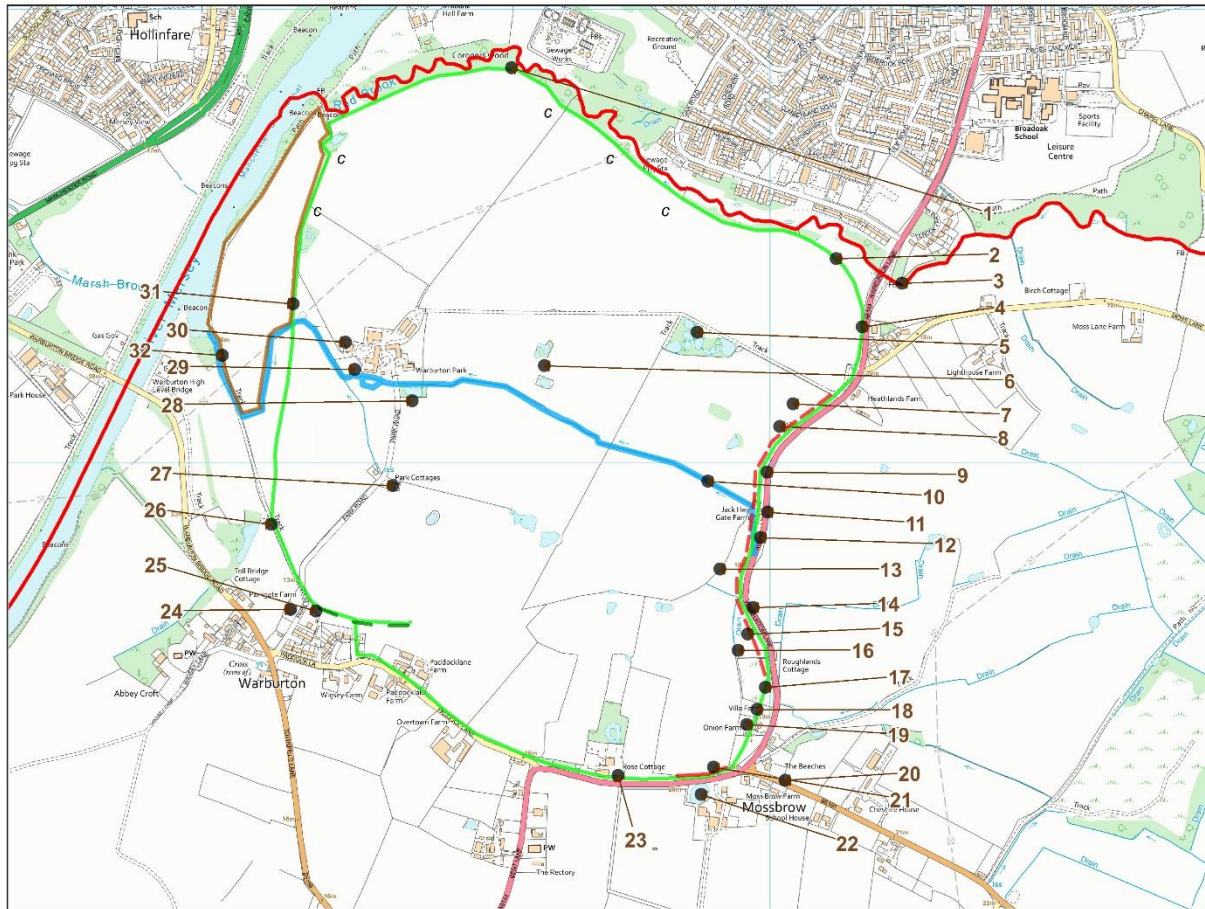

- 5.1.23 In addition to the Deer Park the HEA considers built heritage assets in the area of the Parish to the east of Warburton Lane and to the north of Moss Lane within the strategic site allocation. These include Heathlands Farmhouse and Barn and Barn to southeast of Birch Farmhouse which are Grade II Listed and designated heritage assets and several undesignated heritage assets which all require consideration.
- 5.1.24 A large majority of respondents supported the draft policy in the informal consultation on the emerging draft plan and there were concerns about the need to protect historic assets in the area. Some further non-designated heritage assets were identified by Trafford Council, and these were added to the policy and Map 3.
- 5.1.25 Warburton NDP Policy W2 Warburton Deer Park requires development to protect the historic landscape assets associated with this important heritage asset.

Policy W2 Warburton Deer Park

Policy W2 Warburton Deer Park

Development proposals should recognise and respond positively to the historic landscape assets within and on the park boundary identified on Map 3 Heritage and Landscape Assets related to Warburton Medieval Deer Park together with such heritage assets of archaeological interest as may be discovered in the future.

Map 3: Heritage and Landscape Assets Related to Warburton Medieval Deer Park

 25. Vestigial earthworks
 26. Historic paved pathway (to ferry?)
 27. 1880 cottages
 28. Possible site of water powered flour mill
 29. Moated site of Warburton Park Farm (Manor House Site)
 30. Listed half-timbered barn
 31. Approximate boundary only – see 1757 map
 32. Medieval ferry crossing
- Area of landfill C – Possible salters

— Park Boundary

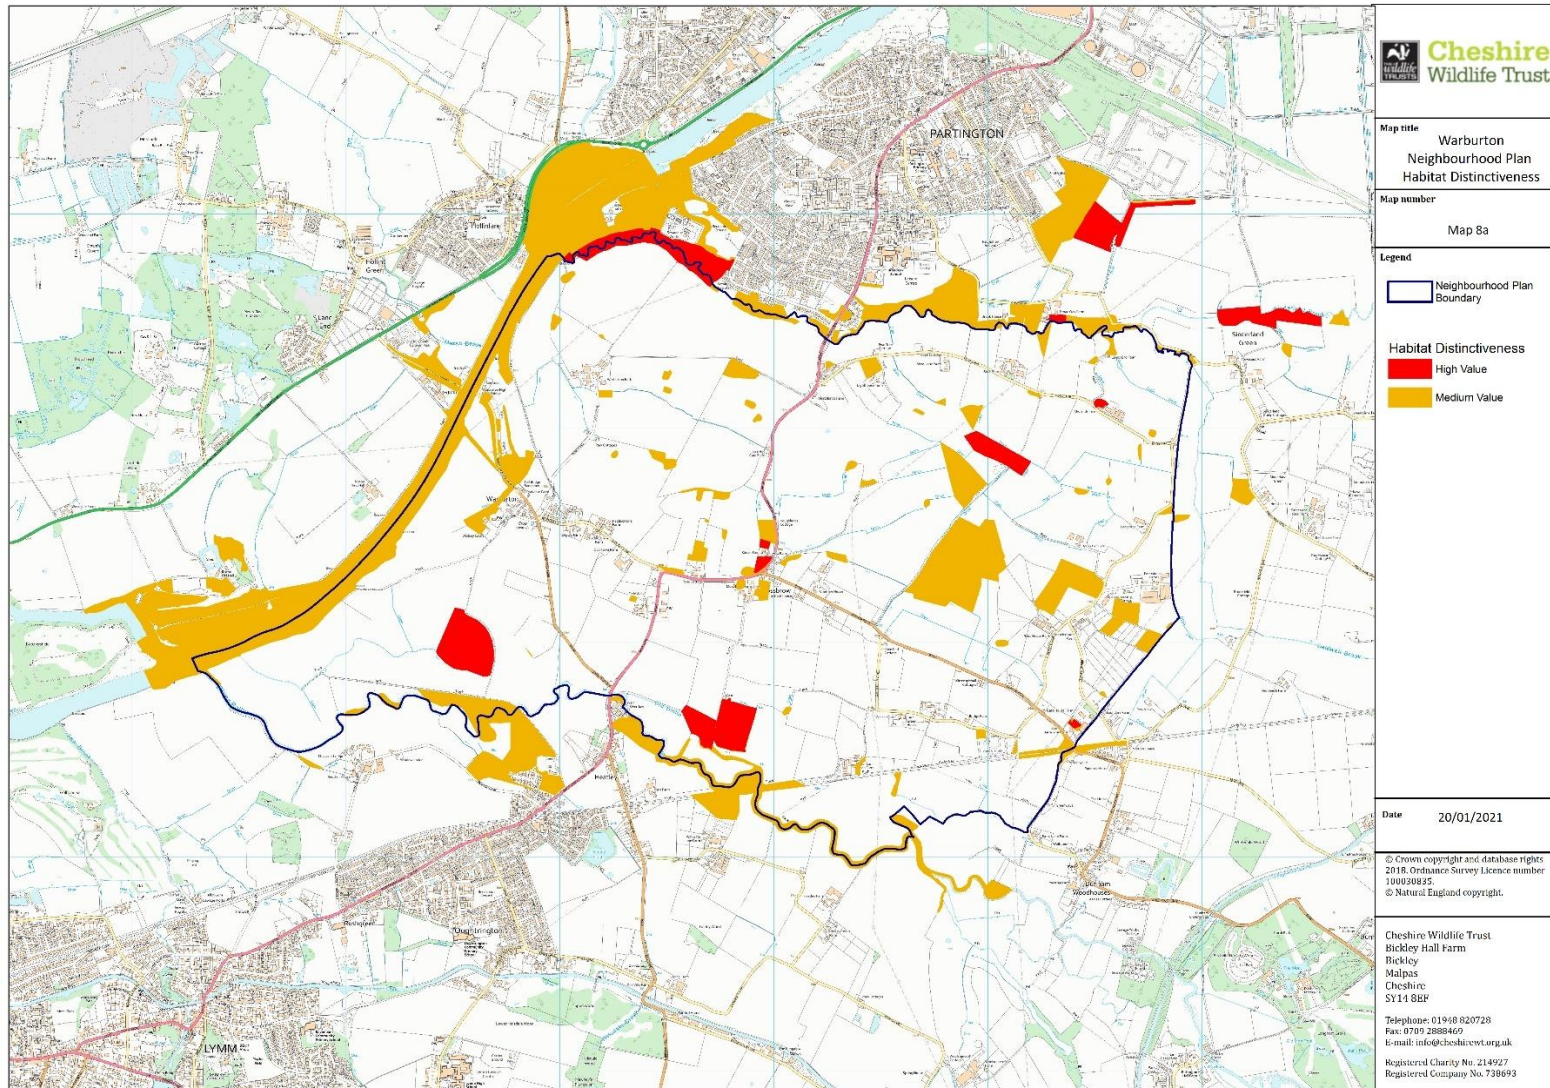

⁵ A 'slang' is a Derbyshire word for a specific feature. It's an area of deer park pale which is given up for another use and the pale reconstructed further back. On a map these are frequently seen as 'slices' taken out of the generally rounded form of the deer park pale. Their form implies continuing use of the deer park behind the slang.

Wildlife

- 5.1.26 Cheshire Wildlife Trust was commissioned by the Parish Council in 2020 to assess local wildlife value in the neighbourhood area and to identify key assets associated with the landscape character and wildlife so these can be referred to in WNDP planning policies. The report, Protecting and Enhancing Warburton’s Natural Environment, Cheshire Wildlife Trust, February 2021 is an important evidence base document and is published on the WNDP pages of the Parish Council website⁶. The conclusion advises that *‘future development of Warburton should respect the natural environment. The most intact landscapes, in terms of biodiversity, landform and historic / cultural associations should be valued highly when planning decisions are made. Protection and enhancement of Warburton’s natural assets is of the utmost importance for nature conservation and ecosystem services but it is also important for the enjoyment of future generations.’*
- 5.1.27 The neighbourhood area includes a number of natural environment assets which have wildlife significance. The Cheshire Wildlife Trust report includes Map 8 reproduced as WNDP Map 4: Habitat Distinctiveness. Areas of High Value are shown in red and Medium Value are in orange.

⁶ See <https://www.warburtonparishcouncil.org/neighbourhood-plan>

Map 4: Habitat Distinctiveness

- **High Distinctiveness Habitat.** *These are natural or semi natural habitats which are of significant or critical importance to wildlife due to high biodiversity and ecological value and should be a priority for conservation and enhancement. They comprise:*

1. *Woodland.*

Coroner’s Wood, Moss Wood and part of Fox Covert and Meadows are Sites of Biological Importance (SBIs). Coroner’s Wood is an ancient woodland. They are likely to support important assemblages of woodland birds such as song thrush and mistle thrush as well a several species of bat. There are records of Himalayan Balsam which poses one of the greatest threats to the condition of woodland and damp riparian woodlands along water courses such as Red Brook are very vulnerable.

2. *Traditional Orchards.*

Four traditional orchards are identified within Warburton. These habitats provide excellent conditions for biodiversity to thrive and can support assemblages of rare species. They are Villa Farm Orchard and Onion Farm Orchard in Mossbrow village, Midlands Farm Orchard off Moss Lane and Barns Lane Farm Orchard.

3. *Grassland.*

Only a few pockets of species rich grassland within Warburton remain and two are designated SBIs – Wigsey Lane Meadows and part of Fox Bridge Covert and Meadows. Species rich grasslands support moths, grassland butterflies and solitary bees and hoverflies. Where they are close to waterbodies, dragonflies and damsel flies are likely to be present.

4. *Running Water.*

The River Mersey and its tributaries Red Brook and the River Bollin provide important corridors and a section of Red Brook is an SBI.

- **Medium Distinctiveness Habitat.** *These provide important wildlife sites in their own right as well as acting as ecological stepping stones and corridors.*

1. *Woodlands.*

There are a few small scattered clocks of broadleaved woodland including several around ponds, close to the cycle way near to Barns Lane Farm and near the Toll Bridge (also with a pond). These can provide valuable habitats for invertebrates, birds and bats.

2. *Grasslands.*

The majority of non built up areas in the Parish are arable or horticultural fields with the remainder largely improved grassland and some neutral and rough grassland. Semi natural grasslands can support large populations of invertebrates and mammals such as brown hare as well as farmland birds, kestrel, over wintering birds habitat for newts.

3. Field Ponds.

Field ponds contribute to the permeability of the landscape for wildlife and provide important habitats for aquatic invertebrates as well as breeding habitats for amphibians. Larger waterbodies are also valuable for breeding and overwintering birds as well as foraging bats. Any ponds should be retained where possible when land is developed.

4. Floodplain Grazing Marsh.

There are fields flanking the River Bollin to the south west of the Parish which are shown as Floodplain grazing marsh priority habitat. Many areas of coastal and floodplain grazing marsh have been agriculturally ‘improved’ and are of limited biological interest but there may be pockets of interest in damper areas. Drainage ditches can support a good diversity of plants and invertebrates such as dragonflies and damselflies and grazing marsh can support waders such as curlew and lapwing.

5. Scattered Trees and Hedgerows

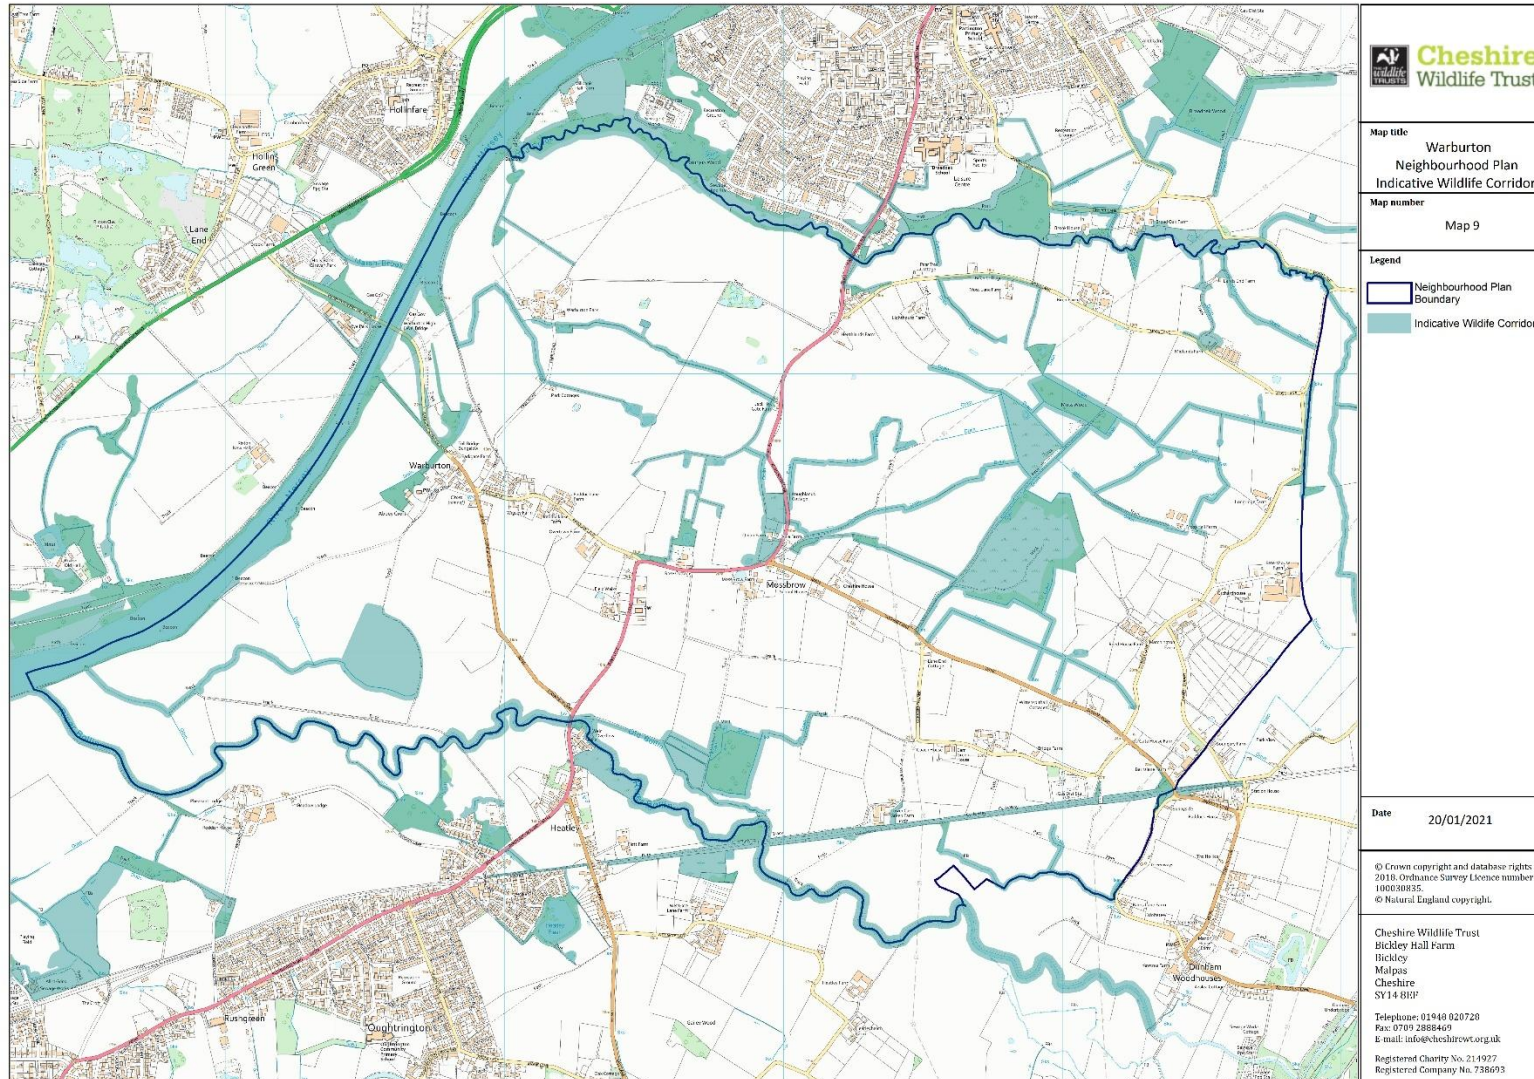

The smaller field parcels are bounded by a good network of hedgerows and field drainage ditches. Many hedgerows within Warburton also include trees. Scattered farmland trees and hedgerows are fundamental to landscape permeability and provide important corridors for foraging bats, small mammals, amphibians and invertebrates as well as birds.

5.1.28 The Report sets out that wildlife corridors are a key component of wider ecological networks as they provide connectivity between core areas of high wildlife value and habitats of high distinctiveness, enabling species to move between them, feed, disperse, migrate or reproduce. The study identifies a number of wildlife corridors (including ‘primary habitat’ or ‘core areas’ for biodiversity) and these are shown on Map 9 in the report - reproduced as WNDP Map 5.

5.1.29 The report also advises that,

*‘Woodland expansion is desirable to buffer Warburton’s existing woodlands particularly as there are opportunities through the Northern Forest Initiative. New plantations that are isolated from existing woodland are of limited value due to slow colonisation by woodland species, whereas planting woodland corridors between existing woodlands creates valuable habitat links for the dispersal of species. The creation, expansion or enhancement of wooded ‘stepping stone’ land parcels between existing woodland would also provide habitat within the landscape for more mobile species to colonise. **It is vitally important that tree planting should only occur on species-poor habitats away from existing (non-woodland) priority habitats, and the edges of watercourses including ditches and ponds.**’*

Map 5: Wildlife Corridors in Warburton Parish

- 5.1.30 The draft policy was supported by 100% of local residents who responded to the informal consultation on the emerging draft plan.
- 5.1.31 Warburton NDP Policy W3 Protecting and Enhancing Wildlife has been prepared taking into account the findings and recommendations in the CWT report. It has been amended following comments from United Utilities submitted in response to the Regulation 14 consultation in relation to drainage and further informal comments provided by Trafford Council prior to submission.

Policy W3 Protecting and Enhancing Wildlife

Policy W3 Protecting and Enhancing Wildlife

Development proposals should avoid areas of high distinctiveness habitats (see Warburton NDP Map 4).

Any development adjacent to identified wildlife areas (Maps 4 and 5) located with the Warburton Neighbourhood Plan Area which may have a detrimental impact on them should incorporate an appropriate level of mitigation to lessen impacts on wildlife while seeking to enhance their overall condition to achieve a net-gain for biodiversity, for example by:

- 1. Retaining and enhancing important semi-natural habitats and key features for biodiversity and improving the permeability and function of the site for wildlife by creating new resources within and new connections to the wider landscape.**
- 2. Embedding in designs out of bounds areas and dark corridors along watercourses, woodland edges and hedgerows.**
- 3. Incorporating directional, low spillage (bat sensitive) lighting on the outside of buildings or in car parks and along pathways and watercourses.**
- 4. Installing hedgehog-friendly fencing as standard, purposely designed to allow the passage of hedgehogs from one area to another.**
- 5. Creating south facing banks or bunds for reptiles, butterflies and other invertebrates and the incorporation of bee bricks and bat/bird boxes into the design of buildings, ideally made of highly durable material such as woodcrete.**
- 6. Surface water must be discharged in accordance with the surface water hierarchy in national planning practice guidance.**

Wherever possible, opportunities should be taken also to protect and enhance other areas of wildlife value located within the Warburton Neighbourhood Plan Area. These include wildlife corridors (Map 5) and areas of high or medium habitat distinctiveness outside the wildlife corridors (Map 4) which provide important wildlife habitats and act as ecological stepping stones. They comprise semi natural grassland, ponds and semi natural woodlands as well as hedgerows and drainage ditches which provide connectivity between high distinctiveness areas. If development is proposed in these areas, applicants will be required to demonstrate they have applied the mitigation hierarchy and justify why the sites cannot be avoided or demonstrate the continued functioning of the wildlife corridors.

Tree planting should only take place on species-poor habitats away from existing (non-woodland) priority habitats, semi-natural habitats, habitats of value to wildlife and the edges of watercourses including ditches and ponds.

Warburton Moss

- 5.1.32 Warburton Moss is an area of lowland mossland, known also as lowland raised bog. The [Lowland Mosslands Habitat Action Plan, Greater Manchester Biodiversity Project 2008](#) describes how British mossland habitat began to form about 10,000 years ago when peat was laid down on marine, estuarine or fluvial deposits adjacent to estuaries, on river floodplains or on the sites of shallow glacial lakes. These wet, waterlogged areas were originally colonised by reeds and rushes. Due to the waterlogged anaerobic conditions, dead plant material could not be fully broken down and began to build up on the bottom of water bodies, leading to the formation of fen peat. Bog mosses (Sphagnum mosses) began to colonise. At this point, the sphagnum content of the underlying peat increased, and the peat changed from fen to bog peat. As the peat accumulated, the surface of the bog was elevated above the surrounding land, forming a dome, hence the term - raised bog. Being elevated above the surrounding groundwater, raised bogs are fed purely from rainfall and this helps to maintain nutrient poor conditions within the bog system.
- 5.1.33 Mosslands have significant wildlife value supporting highly specialised plants, invertebrates and birds and due to the preservative quality of peat, mosslands also have an immense value as an archaeological and palaeoecological archive. Mosslands also have a beneficial effect on water quality if managed appropriately and reduce flood risk as they soak up water during heavy periods of rainfall and gradually release it over a period of time. This is a very relevant issue for Warburton as the area is low lying, flat and prone to flooding⁷. Unfortunately, there are no intact

⁷ See Government Flood Map for Planning <https://flood-map-for-planning.service.gov.uk/>

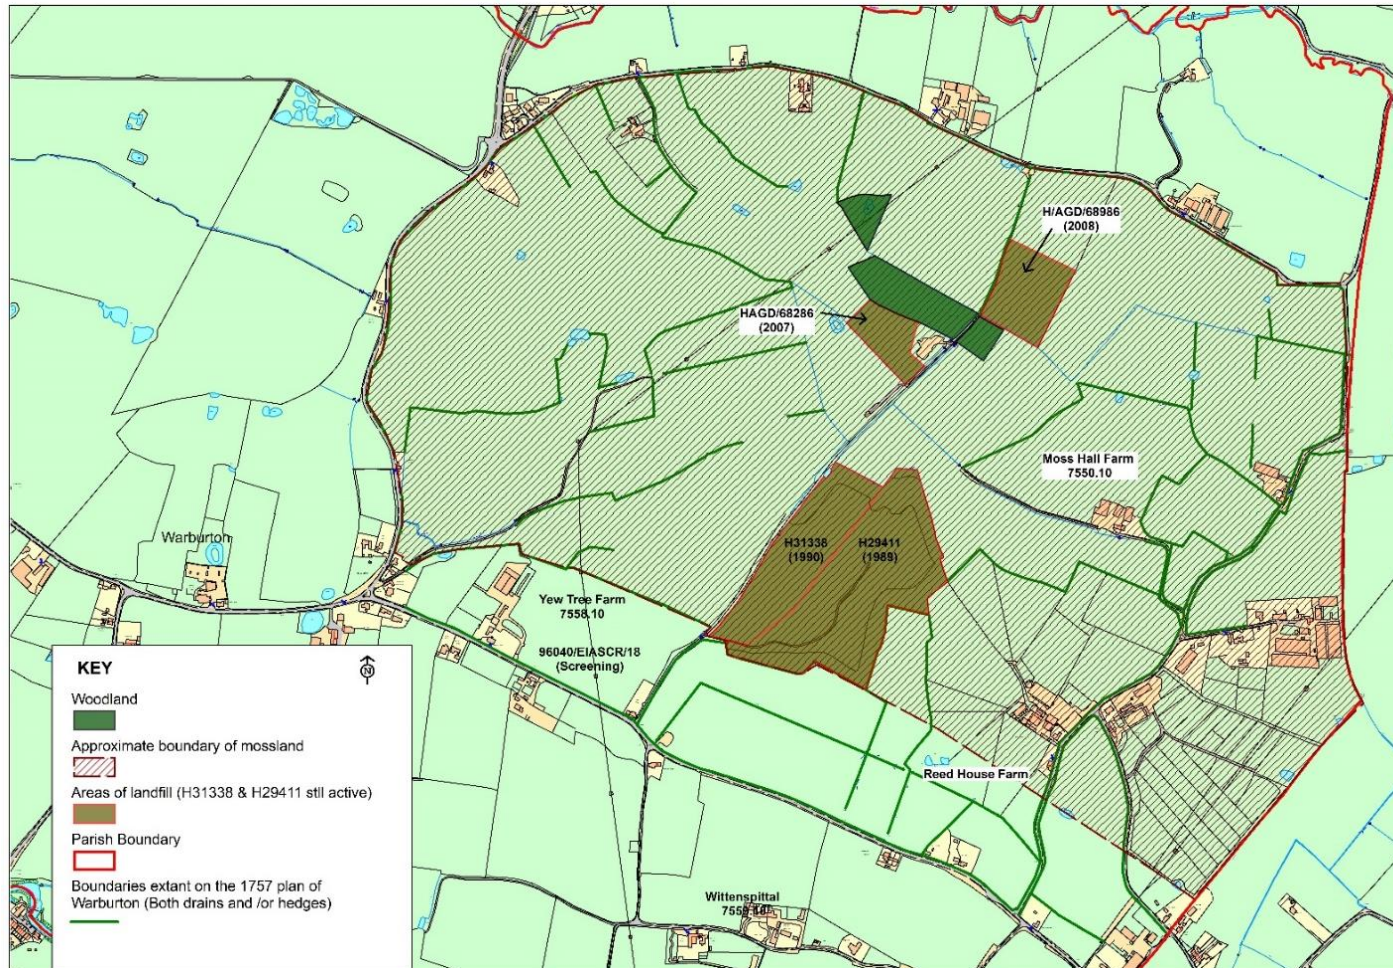

raised mosslands left within Greater Manchester, with the majority of them drained and fertilised to create farmland and some worked for peat.

- 5.1.34 The likely extent of Warburton Moss within the Parish is shown on Map 6 as Warburton Moss Landscape Area.
- 5.1.35 From prehistoric times mosses were an important resource for hunting and later for seasonal grazing and peat extraction. There is evidence of pre-historic activity in Warburton Moss: the [Greater Manchester Urban Historic Landscape Characterisation Trafford District Report, July 2008](#) notes that '*Pollen records obtained from Warburton Moss ... demonstrate the clearance of woodland in the Bronze Age and the introduction of cereals.*' The report notes the significance of former mosslands in Trafford and sets out key management issues relating to former areas of Mossland – reproduced in Figure 3.

Figure 3: Key Management Issues relating to former areas of Mossland

Below-ground archaeological potential	<p>Potential for surviving archaeological remains, likely to be well-preserved where present due to waterlogged conditions. Remains may include:</p> <ul style="list-style-type: none"> • Prehistoric artefacts, settlement evidence and human remains • Peat deposits, which can preserve palaeoenvironmental evidence relating to past climates, flora and fauna
Above-ground archaeological potential	<p>Some potential for remains associated with the post-medieval exploitation of mosses.</p> <ul style="list-style-type: none"> • Moss-side settlements may include examples of vernacular buildings • Boundary features relating to piecemeal enclosure at the edges of mosses, particularly drainage ditches, may survive
Historic landscape interest	<ul style="list-style-type: none"> • Surviving areas of unexploited mossland can provide a glimpse of how the prehistoric landscape may have looked
	<ul style="list-style-type: none"> • Areas of former mossland may retain distinctive 18th or 19th century enclosure patterns
Threats	<ul style="list-style-type: none"> • Contamination of archaeological and palaeoenvironmental deposits by industry and utilities, including waste disposal • Peat extraction • Agriculture and drainage • Large-scale development, particularly of industrial or commercial parks
Opportunities	<p>Even where some exploitation has taken place, areas of former mossland can still contain important palaeoenvironmental and archaeological evidence.</p> <ul style="list-style-type: none"> • Areas where the geology suggests a high potential for evidence of human activity, such as former sand and gravel islands where prehistoric camps or shelters may have been erected, can be targeted for archaeological evaluation • Environmental assessments of specific sites can identify survival of palaeoenvironmental deposits, informing research and allowing the mitigation of development impact
Management recommendations	<ul style="list-style-type: none"> • Where good legibility of historic character exists, there should be enhancement through positive management, including restoration where appropriate and protection through the planning process • Where planning permission is granted for a site located in an area of former mossland, conditions should be attached to ensure that provision is made for the investigation of the site's archaeological potential and for the preservation in situ or recording of any archaeological deposits that are encountered • Awareness of issues relating to the importance of historic mossland should be promoted and should feed into Local Development Frameworks, Parish Plans and Spatial Strategies

Map 6: Warburton Moss⁸

@Crown copyright 2022 Ordnance Survey 100055940 on behalf of Warburton Parish Council 0100064955

⁸ Note that the 'Approximate boundary of mossland' is indicative only.

- 5.1.36 Historic England recognises the value of peatlands in the advice note [Peatlands and the Historic Environment An Introduction to their Cultural and Heritage Value, 2022](#). (The term ‘peatland’ is used here to refer to both/either upland and/or lowland deposits.) This sets out that: *‘Peatlands preserve unique archaeological and palaeoecological records, are living historic landscapes, and are part of our biocultural heritage. Peat deposits are important archives of past human activities and environments, often forming over thousands of years. The waterlogged conditions that characterise peatlands result in the exceptional preservation of natural and cultural organic remains, unrivalled at typical ‘dryland’ archaeological sites.’*
- 5.1.37 Any ‘islands’ or raised ground and the land of the fringes of a moss can retain physical evidence for prehistoric human activity. Organic remains can be preserved in peatlands for thousands of years due to the waterlogged, anoxic conditions that characterise these deposits. Direct evidence of human occupation and activity (archaeological remains) can be found:
- at/on the peat surface,
 - within the peat, and
 - below the peat.
- 5.1.38 The report includes the following key points, *‘Peatlands preserve unique, evocative and fragile archaeological sites and artefacts that are generally not found on drylands, and provide an amazing record of environmental and landscape change. They make it possible to place people’s activities within their environmental setting. Their extensive cultural and heritage connections provide exceptional opportunities for public enjoyment and engagement.’* In addition, the report notes, *‘Because of the way they are formed peatlands are important for capturing and storing carbon. Therefore, looking after them is important for tackling the climate crisis.’*
- 5.1.39 The Greater Manchester Combined Authority report on Carbon offsetting published in 2020⁹ sets out the contribution peatland restoration could make towards tackling climate change:
- ‘Greater Manchester contains significant areas of peat bogs and wetlands which in good condition act as carbon sinks, storing and locking away carbon, but which if drained become net sources of carbon. Peatland restoration stops CO₂ losses immediately, creates conditions for laying down fresh peat and can also contribute to improved water quality, habitat creation and flood mitigation and has potential to be considered as eligible for the purposes of carbon offsetting.’*
- [The Greater Manchester 5-year Environment Plan 2019 - 2024](#) sets out an objective to restore 50-75% of our Peatlands in order to mitigate and adapt to climate change.’
- 5.1.40 Natural England do not support the principle of developing on peat. NE has advised that *‘The GM Peat Pilot showed the carbon storage within lowland peat within GM to be between 1,500 – 2,000 tonnes per hectare CO₂-e for 50cm depth of peat. Based on nationally accepted GHG emission estimates, when comparing the estimated CO₂-e loss from development on degraded lowland peatland against the 7-year*

⁹ See [Supporting and Background Evidence Documents](#)

Carbon and Policy Implementation Study – Part 2 - Carbon Offsetting Report to Greater Manchester Combined Authority, April 2020

offset potential of restoring to near-natural bog, a development would need to restore 19 times the area of the development footprint for each metre of peat depth affected, in order to achieve the stated aim of Net Zero by 2028.'

- 5.1.41 Where appropriate, biodiversity offsetting is an option available to developers to fulfil their obligations under the planning system's mitigation hierarchy (avoidance, mitigation, compensation, net gain). Biodiversity net gain delivers measurable improvements for biodiversity by creating or enhancing habitats in association with development. On-site habitat retention / enhancement / creation should be provided (see WNDP Policy W3 Protecting and Enhancing Wildlife), but where this is not possible off-site measures may also be provided to achieve a net gain in biodiversity. Proposals to restore areas of mossland and moss woodland in Warburton could form part of on or off-site BNG measures.
- 5.1.42 Historic England's Peatlands guidance advises that *'restoration works themselves can result in changes to, and loss of, historic environment features, archaeological remains and peat deposits if not carefully planned. Methods used in restoration schemes include: re-profiling, grip blocking (using dams of peat, wood, plastic sheeting, or heather/coir plant bales to block up old drainage ditches) and vegetation planting/seeding (e.g. of Sphagnum moss). The method(s) used need to be tailored depending on the character of each site, and will need to consider: loss of, or disturbance to, the sediments, as well as peat compression.'*
- 5.1.43 WNDP Policy W4 Warburton Moss has been prepared to support initiatives which contribute to the carefully planned restoration of mossland as part of biodiversity net gain and carbon capture initiatives. This is particularly important in Warburton as tree planting may be seen as an attractive and relatively easy way of offsetting carbon in new development, but planting trees may not be the most appropriate or desirable option in some areas (see also Policy W1 Conserving and Enhancing Local Landscape Character). Policy W4 recognises that restoration of mosslands provides a far more effective method of carbon capture whilst supporting locally appropriate opportunities for biodiversity net gain and flood mitigation.
- 5.1.44 However, the opportunities to support enhancements to the natural environment will need to be planned carefully to ensure that projects do not result in losses to any historic assets and archaeological remains on the peat surface, in the peat or below the peat. In addition, whilst peat loss is unwanted and needs to be reversed and/or reduced, the destructive processes involved can lead to important archaeological discoveries and provide opportunities for engagement.
- 5.1.45 The draft policy was supported by 100% of local residents who responded to the informal consultation on the emerging draft plan. Policy W4 was amended following the Regulation 14 consultation to include additional wording recommended by Natural England.

Policy W4 Warburton Moss

Policy W4 Warburton Moss

Proposals which contribute to the restoration of areas of mosslands to lowland raised bog habitat and to fen and other wetland habitats as part of a transition to lowland raised bog in the long term in Warburton Moss Landscape Area as shown on Map 6 will be supported as part of biodiversity net gain (BNG), carbon capture and flood mitigation measures.

Development proposals within Warburton Moss (indicatively identified on Map 6) must undertake hydrological and ground investigations to determine the extent and quality of any peat to minimise any impacts on areas of deep peat and inform the potential for restoration.

Archaeological surveys must be undertaken prior to peat restoration works or other development, and projects must be planned carefully to ensure any archaeological and historic environment assets are properly recorded and preserved as they are revealed.

Opportunities should be taken to promote any important archaeological discoveries through local community engagement, education and publicity, for example through interpretation boards and by describing any local finds in the proposed heritage trail (see Warburton NDP section 5.5 Action Travel, Recreation and Leisure).

5.2 Protecting and Enhancing Built Heritage and Archaeology

The Old School

Historic Character

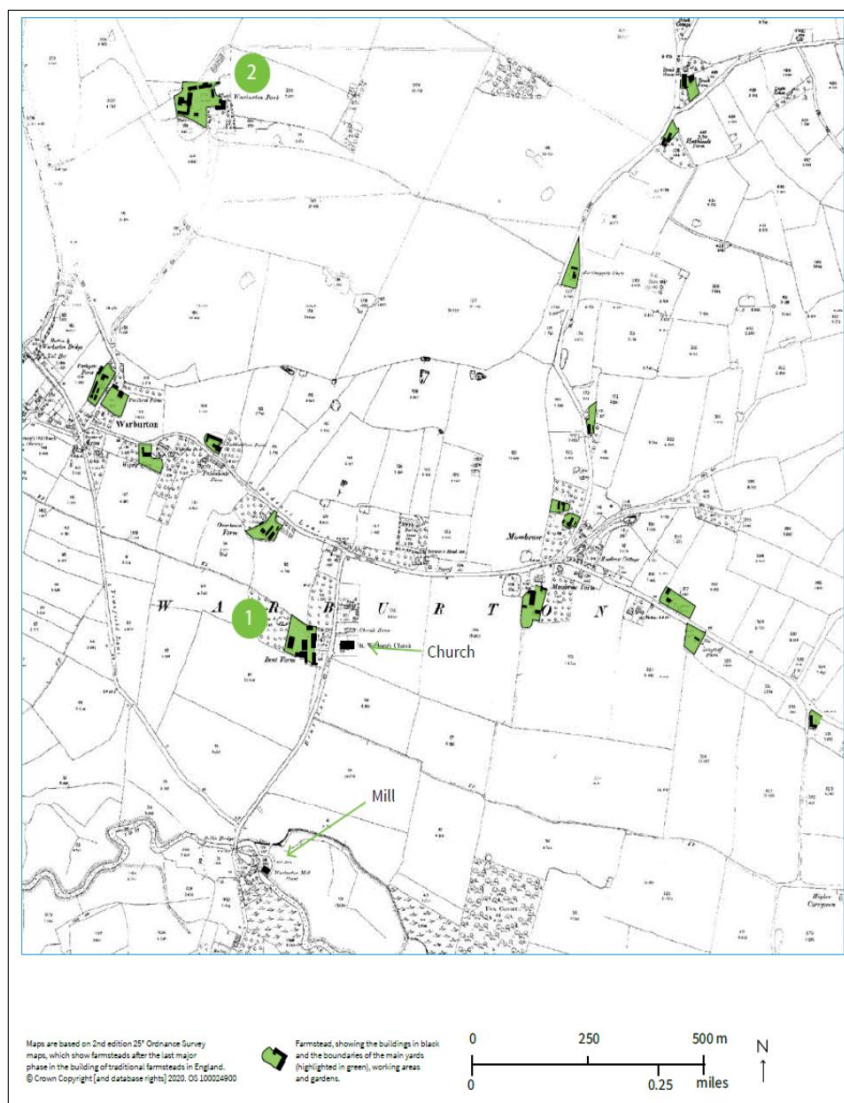

- 5.2.1 The built heritage assets and other buildings in Warburton Parish are highly valued by residents and visitors and make a positive contribution to its distinctive local character. The historic environment is a valuable, finite and irreplaceable resource, which is central to the character and identity of the area. It has a crucial role in supporting sustainable development through enhancing the quality of life of those currently living in and visiting the area and should do so for generations to come as well as delivering wider economic benefits through visitors.
- 5.2.2 Archaeological sites, findspots, historic buildings and landscape assets are recorded on the Greater Manchester Historic Environments Record (HER) held at the Greater Manchester Archaeological Advisory Service (GMAAS), archaeological advisors to Trafford Borough Council¹⁰. Developers should consult the HER at an early stage when preparing a planning application that may affect any areas of historical or archaeological interest in the Parish. In addition to numerous archaeological finds, designated heritage assets in Warburton include the Conservation Area and 22 Listed Buildings including the Grade I Old Church of Saint Werburgh – see Appendix 3. There are also numerous non designated heritage assets.
- 5.2.3 [Greater Manchester Urban Historic Landscape Characterisation Trafford District Report, July 2008](#) includes a number of references to historic buildings in Warburton. Warburton is recognised as one of only four true medieval villages in the Trafford area (p14). An archaeological building survey undertaken in Warburton recorded a

¹⁰ See <https://gmaas.salford.ac.uk/>

number of early post-medieval cruck framed vernacular dwellings. Bent Farm was dated 1600.

- 5.2.4 Historic England’s [Farmstead and Landscape Statement for the Mersey Valley \(NCA 60\)](#) describes Warburton as ‘an area of largely dispersed settlement with dispersed farmstead layouts and 17th-century and earlier timber-framed barns and houses, set within fields which, although enlarged and realigned in the 19th century, have retained clear traces of much earlier patterns which include routeways for moving stock to grazing grounds. Examples include Bent Farm with a 16th-century cruck barn and house and Warburton Park Farm, relating to larger fields, with a 17th-century or earlier timber-framed cow house.’ Historic Farmsteads are identified on a map which is re-produced as **Figure 4**: Bent Farm is identified as (1) and Warburton Park Farm as (2).

Figure 4: Warburton Farmsteads

- 5.2.5 [Warburton Village Design Statement](#) was published in 2003 and has been approved by Trafford Council as a one of a number of non-statutory planning guidance documents to guide development and provide clear advice to stakeholders wanting to develop in specific areas of the borough. Such documents are used by the Council

as a material consideration when determining applications for planning permission and other matters related to these specific areas.

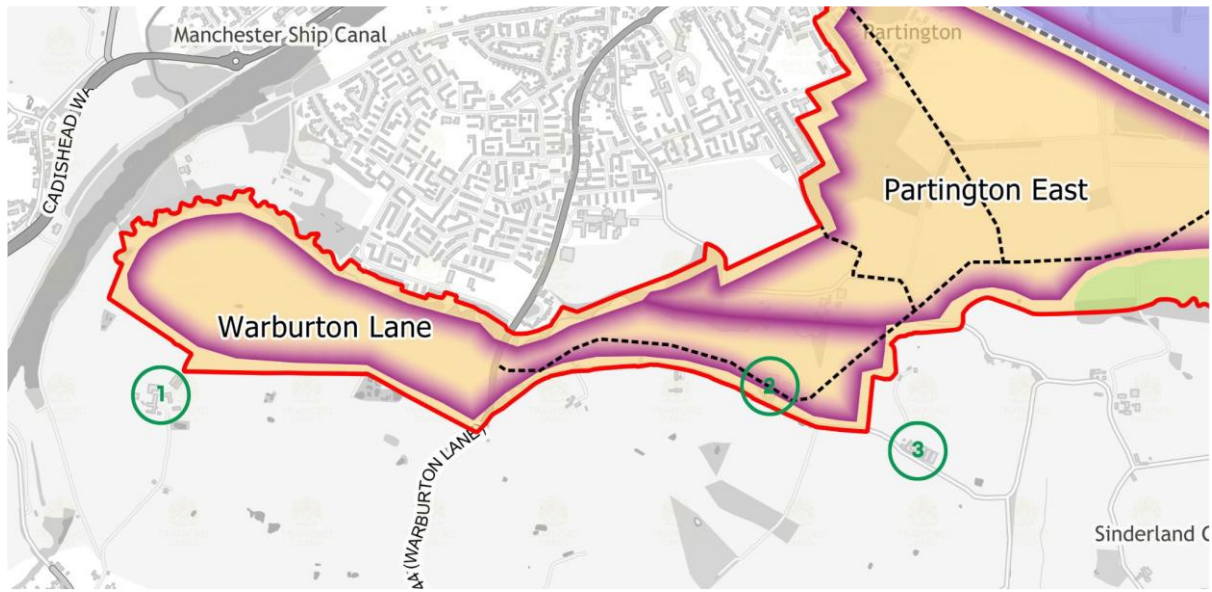

- 5.2.6 Development in the rural area of the parish typically takes the form of scattered farmsteads comprising a main farmhouse with subsidiary buildings such as barns, workers' cottages, stables and dairies. The Village Design Statement describes the local vernacular architecture including cruck framed structures dating from the 15th – 17th centuries, traditional brick buildings and estate houses dating from the late 19th century and more recent, 20th century development. Important local landmarks are noted such as the Old Church and associated historical assets, the new church on Bent Lane, the base of a stone cross and stone wall, village stocks, Bent Farm and the Saracen's Head public house. The new church, church house, parish rooms, caretaker's house, school and post office were designed by Victorian architect John Douglas who was influenced by the Arts and Crafts movement. Many of the farm buildings on the Egerton-Warburton estate also reflect this influence in materials and detailing, with brick and tile mullioned windows, terracotta detailing such as finials and dogtooth work and projecting shaped purlins to the roof. The Design Statement includes a series of design guidelines to help ensure development is appropriate to Warburton village.
- 5.2.7 Trafford Council adopted Trafford Design Code on 16th September 2024. This sets out design guidance for development across the Borough. It has been written as a Supplementary Planning Document to sit alongside the National Design Guide and National Model Design Code as a material consideration in planning decision making. The design codes for Rural Trafford applies to Warburton Neighbourhood Plan Area.
- 5.2.8 Warburton Design Guidance and Codes sets out local Design Guidance for different parts of the neighbourhood plan area. Wherever possible development should incorporate the design principles according to their location in order to ensure changes are sympathetic to the existing character. Overall designs should take their cues from and be inspired by the extraordinary heritage of the neighbourhood plan area. Warburton NDP Policy W5 Responding to Local Character requires development proposals to ensure designs respond positively to the local context and character of a traditional farming parish.
- 5.2.9 The draft policy was supported by a majority of respondents (98%) in the informal consultation on the emerging draft plan. Comments included that the policy should also support high quality contemporary design where they respect local context. The policy was amended and split into two separate policies following discussions with Trafford Council. Policy W5 was further amended following the Regulation 14 consultation to identify those parts of Warburton where the historic farmstead character principles should be applied to development, and where other design principles should apply.

Policy W5 Responding to Local Character

Policy W5 Responding to Local Character

- 1. Development proposals outside of the PfE Policy JPA 30 New Carrington allocation and in close proximity to farming development as identified in Figure 5: Character Area Samples should respond to the overarching agricultural and rural character of Warburton Parish in accordance with Warburton Design Guidance and Codes Part 4.3.1 Using Historic Farmstead Character to Guide Design (see Appendix 4 of Warburton Neighbourhood Development Plan).**
- 2. In addition, and subject to the delivery of residential development at Warburton Lane at an average residential density of 25 dph, development on the rural/urban fringe within the PfE Policy JPA 30 New Carrington allocation will be expected to respond positively to Warburton Design Guidance and Codes Part 4.3.1 Using Historic Farmstead Character to Guide Design (see Appendix 4 of Warburton Neighbourhood Development Plan).**
- 3. In all parts of Warburton Neighbourhood Plan area schemes should respond to local character and have reference to the following design principles set out in the Warburton Design Guidance and Codes:**
 - A. Building Heights and Roof Forms (Part 4.3.2); and**
 - B. Materials and Detailing (Part 4.3.4).**
- 4. High quality contemporary designs will be supported where they respect local context and character.**

Figure 5: Warburton Farms adjacent to or within the New Carrington Allocation

Key

2. Birch Farm
3. Midlands Farm

Heritage Assets

- 5.2.10 The Warburton Design Guidance and Codes (see Appendix 4 of the WNDP) sets out design principles for Heritage Assets (Part 3.2). The design principles apply to heritage assets in general and not all would apply to designated assets. The document also describes the typical features of a sample of historic and more contemporary developments from across the parish. Proposals that positively contribute to local character are highlighted and future development should respond to these. Features that should be avoided within future development are also identified.

Policy W6 Protecting Designated Heritage Assets

Policy W6 Proposals Affecting Designated Heritage Assets

Proposals affecting designated heritage assets should be in accordance with such design principles (Warburton Design Guidance and Codes Part 3.2 Heritage Assets (Appendix 4 of Warburton Neighbourhood Development Plan)) as are relevant to designated heritage assets.

Designs for new development should respond sensitively to the significance and setting of any designated heritage assets affected by the proposal and use soft landscaping, vegetation screening, building orientations, heights, materials and colour to minimise any adverse visual impacts. Cumulative impacts which adversely affect several or many designated heritage assets should be avoided.

Non designated Heritage Assets

- 5.2.11 Inside and outside the Conservation Area and in addition to buildings and structures on the statutory List held by Historic England, there are other buildings and sites in the neighbourhood area that contribute to local character and sense of place because of their intrinsic heritage value. Such heritage assets may be offered a proportionate level of consideration by the local planning authority if they have been identified and publicised as being included on a formally adopted 'local heritage list of non-designated assets'¹¹. Non designated heritage assets are '*buildings, monuments, sites, places, areas or landscapes identified by local planning authorities as having a degree of significance meriting consideration in planning decisions but which are not formally designated*'.

¹¹ See Local Heritage Listing: Identifying and Conserving Local Heritage Historic England Advice Note 7 (Second Edition) 27 January 2021
<https://historicengland.org.uk/images-books/publications/local-heritage-listing-advice-note-7/>

- 5.2.12 Trafford Council in consultation with the Parish Council has prepared a local list of Non-designated Heritage Assets, taking into account the guidance published by Historic England. These are currently identified in Appendix 3 and the full report ‘Trafford Local Heritage List - Warburton’ is provided on the evidence page of the WNDP website. The list is not exhaustive or definitive and non designated heritage assets also can be identified where they are not included on a formal list, including when development proposals come forward. There are also other non-designated heritage assets recorded on the HER that would not satisfy the criteria for inclusion on the Local List and information about these is provided in Appendix 3.
- 5.2.13 In accordance with NPPF paragraph 209 the effect of an application on the significance of the non-designated heritage asset should be taken into account in determining the application. In weighing applications that directly or indirectly affect non-designated heritage assets, a balanced judgement will be required having regard to the scale of any harm or loss and the significance of the heritage asset.
- 5.2.14 Policy W7 relates to proposals which impact on non designated heritage assets in the Warburton NDP area. 100% of local residents who responded to the informal consultation on the emerging draft plan supported this policy and there were comments about the importance of protecting heritage whilst consulting with landowners.

Policy W7 Non designated Heritage Assets

Policy W7 Non designated Heritage Assets

A candidate list of buildings and structures identified as non-designated heritage assets is included in Appendix 3 of the Warburton Neighbourhood Development Plan. This list may be amended from time to time.

Development proposals affecting non designated heritage assets and/or their settings will be considered against Places for Everyone Policy JP- P2: Heritage.

Warburton Conservation Area

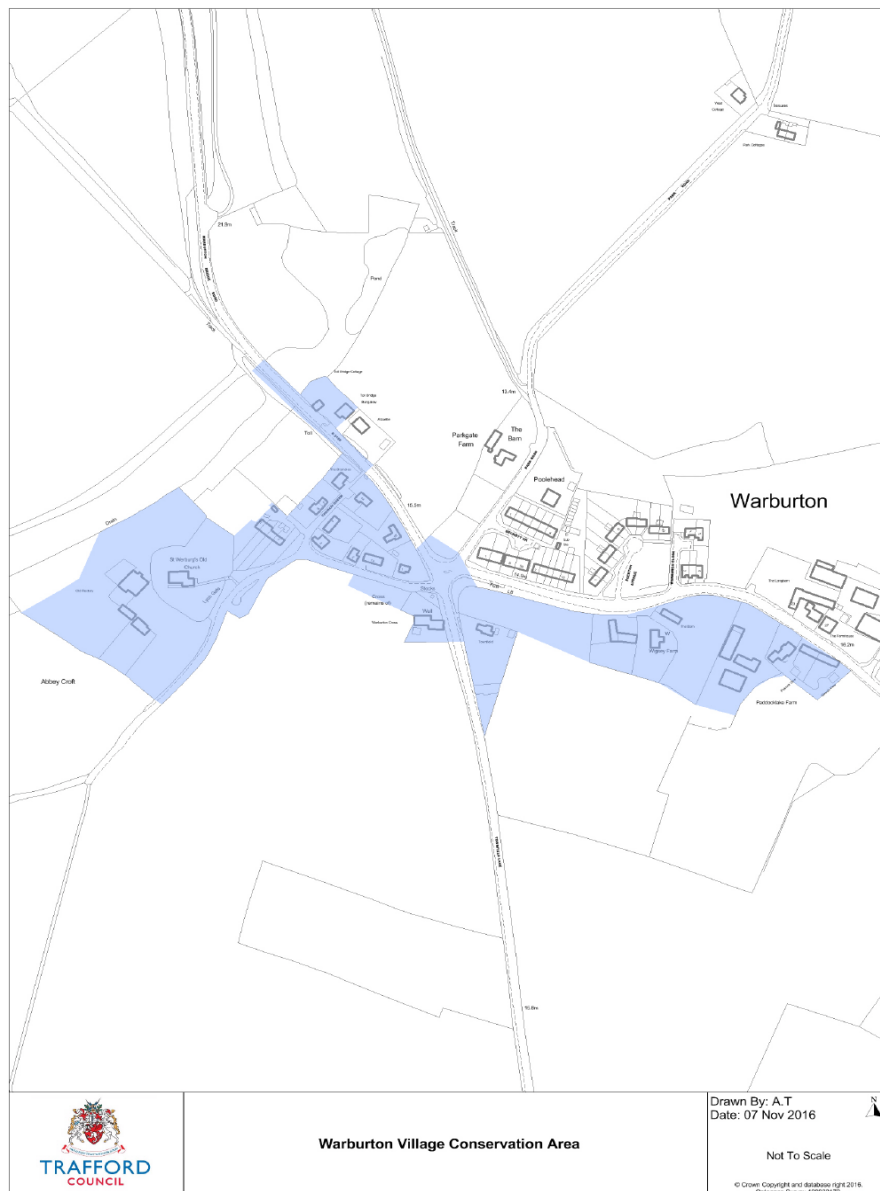

- 5.2.15 Warburton is one of the most intact medieval villages in the region and is an extremely rare example. The Warburton Village Conservation Area was designated on 29th July 1975 by Trafford Council. The [Warburton Conservation Area – Supplementary Planning Document SPD5.20](#) comprises a Conservation Area Appraisal (CAA) and [SPD5.20a](#) comprises the Conservation Area Management Plan (CAMP). Both documents were adopted by Trafford Council’s Executive on 31st October 2016. Map 7 shows the extent of the Conservation Area. The boundary was extended significantly in 2016.
- 5.2.16 The Architectural Value is described in the CAA in section 3.2:

‘3.2.1 The architecture within the Conservation Area typically follows a distinctive local vernacular which combines the detailing of the Arts & Crafts style with a local characteristic for two-storey buildings, the upper storey of which is set high up under the pitched roof with large gable dormers. This style is especially prevalent on Church Green, where recent new buildings have echoed the same style.

3.2.2 In the east boundary extension area, the 1990s conversion works to the former farm buildings have been carried out to a very high standard. The resulting new dwellings continue to respect the architectural hierarchy of each farm site, thereby ensuring that the original farmhouses are not eclipsed.’

5.2.17 The CAA also notes that ‘The Warburton Village Conservation Area is particularly notable as a place which retains much of its historic rural character, having largely resisted the suburban and industrial expansion of the city of Manchester from the 19th century onwards’ (paragraph 4.3.11).

Map 7: Warburton Village Conservation Area

Cross Base and Stocks

- 5.2.18 The CAMP includes a number of Conservation Area Management Policies related to design. Warburton NDP Policy W8 Warburton Conservation Area requires development proposals to have regard to these design principles.
- 5.2.19 The draft policy was supported by a majority of respondents to the informal consultation on the emerging draft plan and was amended and updated following discussions with Trafford Council.

Policy W8 Warburton Conservation Area

Policy W8 Warburton Conservation Area

All proposals in Warburton Conservation Area should be sensitive to the local context in terms of design, materials, boundary treatment, streetscape and the public realm of the Conservation Area, and respond positively to the design guidance set out in the adopted Warburton Conservation Area Appraisal Supplementary Planning Document SPD5.20 and Warburton Conservation Area Management Plan Supplementary Planning Document SPD5.20a.

Proposals for the demolition or significant alteration of buildings identified as positive contributors to the Conservation Area (see Map 2: Townscape analysis in the CAMP) will be assessed in terms of the significance the positive contributors make to the Conservation Area. Consideration will be given as to whether their proposed alteration or demolition would result in substantial harm or less than substantial harm, taking into account the relative significance of the element affected and its contribution to the significance of the Conservation Area as a whole.

Archaeology

- 5.2.20 There is evidence that the Warburton neighbourhood area has been occupied for a considerable period of time. Trafford Historic Landscape Characterisation (2008) advises that *'Mesolithic flint scatters were noted in the parish of Warburton on sand and gravel ridges to the east of the village, and between the Rivers Mersey and Bollin south west of Warburton.'* Furthermore, cereal pollen from Warburton Moss indicates short-lived clearance episodes and some cereal cultivation from the third to the second millennium BC (p11).
- 5.2.21 The report goes on to say that *'a number of potential ditch-enclosed farmstead sites of the Iron Age and Romano-British periods have been identified in the Trafford district. Cropmarks indicating such sites were identified along a ridge running from Warburton to Bowdon Hill and to the west of the village at Dunham. It is likely that the area was extensively settled with a network of farms and proto-villages by the time of the Roman impact, particularly in the middle Mersey and Lower Bollin districts (Nevell 1997).'*
- 5.2.22 In terms of the early medieval period, the curvilinear plans of graveyard at Warburton suggests Dark Age origins. Place names ending in '-ton' (such as Warburton) are generally ascribed to the late Saxon period. In medieval times the manor formed the local centre of political and economic organisation. Warburton became separated from the parish of Lymm at the end of the 13th century. The church in Warburton was mentioned in deeds of the period 1187-90 as a chapel of ease for the parish of Lymm and Warburton became briefly significant in the late 12th century as the site of a Premonstratensian priory (named after the French order of monks from Premonstre). The priory was dissolved in 1270/1 (p13). Notable artificial medieval landscape divisions include the 10m-wide ditch dividing Warburton and Dunham.
- 5.2.23 There have been numerous archaeological finds in Warburton over many years and the neighbourhood area has significant potential for further archaeological discoveries. Archaeological finds include the following¹²:
- Late Neolithic and early Bronze Age flints (from c. 3000 to c. 1500 BC Neolithic saddle quern (from c. 4000 to 2500 BC) suggesting settlement nearby;
 - Iron Age metalwork;
 - Two rotary quern stones of Iron Age or Roman date (c. 700 BC to c. 400 AD);
 - Roman coin hoard and a large collection of Roman metal finds including brooches and horse gear;
 - Saxon and later medieval metalwork, the latter including a large number of spindle whorls and horse gear.
- 5.2.24 Warburton is a lowland landscape that has produced extensive evidence for later prehistoric, Roman, medieval, and post-medieval activity and occupation. The medieval and post-medieval activity is represented by above ground remains that include the Grade I listed timber-framed church, medieval cross-base timber-framed

¹² See Warburton: Glimpses of Rural Life: The Archaeology And History of a Cheshire Village, Michael Nevell with Marjorie Carney, Jenny Cracknell, Jim Haworth, Chris Hill & Denise Jubb, University of Salford, 2015

farms and barns, brick-built barns and farms of the 18th and 19th century and landscape assets such as stone walling, evidence for the enclosure of the deer park, open fields, and mossland, and historic roadways. Surviving historic hedgerows can be found in the landscape between Carr Green and The Bent Farm, south to the village in the area of the former open fields, and along the trackway to the late medieval ferry north of the village. Of particular historic sensitivity is the site of the former deer park, the late medieval farm centres at Birch Farm, Higher Carr Green Farm, Midland Farm, Onion Farm, Park Farm, and The Bent, and the village core around The Green. All these sites contain standing timber-framed buildings. In addition, Warburton contains a significant number of buildings designed by the later 19th century architect John Douglas, some of which are of national significance and protected as listed buildings.

- 5.2.25 Below ground archaeology for the earlier periods has been located around the village and south of Moss Brow Farm, and along the sand and gravel ridge between Higher Carr Green and The Bent farm. These areas are particularly sensitive for understanding the earlier development of the Warburton landscape, such as the origin of the village, the precise location of late Iron Age and Roman settlement around Moss Brow, the medieval routes into Warburton and the historic fording point at the old church via Higher Carr Green and Bent Farm.
- 5.2.26 Any development proposals should be informed by a robust consideration of any potential harm to known or suspected archaeological remains. This should include a suite of non-intrusive techniques such as desk-based research, geophysical survey, metal-detector surveys and field walking, coupled with targeted intrusive investigation via evaluation trenching. Where archaeological remains of interest are identified, a further phase of more detailed excavation, recording and reporting. This will inform a scheme to disseminate the findings, such as the installation of permanent information panels and / or publication, depending on the significance of the results.
- 5.2.27 Policy W9 Archaeology has been prepared to help ensure that development proposals investigate, protect, conserve and enhance assets of archaeological significance, recognising the valuable contribution they make to the unique quality, sense of place, and environment of Warburton Parish.
- 5.2.28 The draft policy was supported by 100% of local residents who responded to the informal consultation on the emerging draft plan.

Policy W9 Archaeology

Policy W9 Archaeology

Development proposals should protect, conserve and enhance assets of archaeological interest including known surface and sub-surface archaeology, and ensure any unknown and potentially significant deposits are identified, recorded and reported upon and appropriately considered prior to and during development.

Lack of current evidence of sub-surface archaeology must not be taken as proof of absence.

Planning Policy Context – Built Heritage and Design

Relevant Places for Everyone policies include:

- Policy JP-Strat11: New Carrington
- Policy JP-G1: Landscape Character
- Policy JP-G9: The Green Belt

- Policy JP-P2: Heritage
- JPA 30 New Carrington

Relevant Trafford Local Plan: Core Strategy Policies include:

- Policy L7 – Design (except L7.1, L7.3 bullet 1, L7.4 and L7.5)

5.3 Sustainable Design

- 5.3.1 Warburton NDP is being prepared during a time of increased public awareness of the climate emergency. There is clearly a need for plans and proposals to promote more sustainable development which minimises resource consumption and carbon emissions and is climate resilient. Climate change is leading to more frequent, extreme weather events such as storms, flooding, periods of very high temperatures and drought.
- 5.3.2 Much of the Parish is low lying, and some areas are at risk of flooding, particularly those areas close to watercourses, the old course of the River Mersey and the Manchester Ship Canal. On the other hand, fragile habitats in the mosslands and those associated with water courses and ponds may be under pressure during dry spells and times of drought.
- 5.3.3 There is a need to ensure new development in Warburton is designed to respond to these challenges and does not exacerbate or contribute to the climate emergency. Planning policies can promote more sustainable designs which reduce resource consumption and carbon emissions, and which support more comfortable and resilient living environments.
- 5.3.5 Policy W10 Sustainable Design and Climate Change has been informed by the design guidance in the Warburton Design Guidance and Codes. The draft policy was supported by 98% of respondents to the informal consultation on the emerging draft plan although there were concerns about the suitability of the area for development due to flooding and climate change.

Policy W10 Sustainable Design and Climate Change

Policy W10 Sustainable Design and Climate Change

All development will be expected to be resource and energy efficient and climate resilient. Designs should have regard to the principles set out in Part 4.3.3 Sustainability and Climate Change in the Warburton Design Guidance and Codes (see Appendix 4 of Warburton Neighbourhood Development Plan).

Development proposals also should have regard to the design principles set out in Part 3.5 Water & Flood Risk in the Warburton Design Guidance and Codes in Appendix 4 of Warburton Neighbourhood Development Plan and Trafford Design Code.

Planning Policy Context – Sustainable Design

- Policy L7 – Design (except L7.1, L7.3 bullet 1, L7.4 and L7.5)

5.4 Active Travel, Recreation and Leisure

Stile from Deer Park to Park Farm

Walking and Cycling

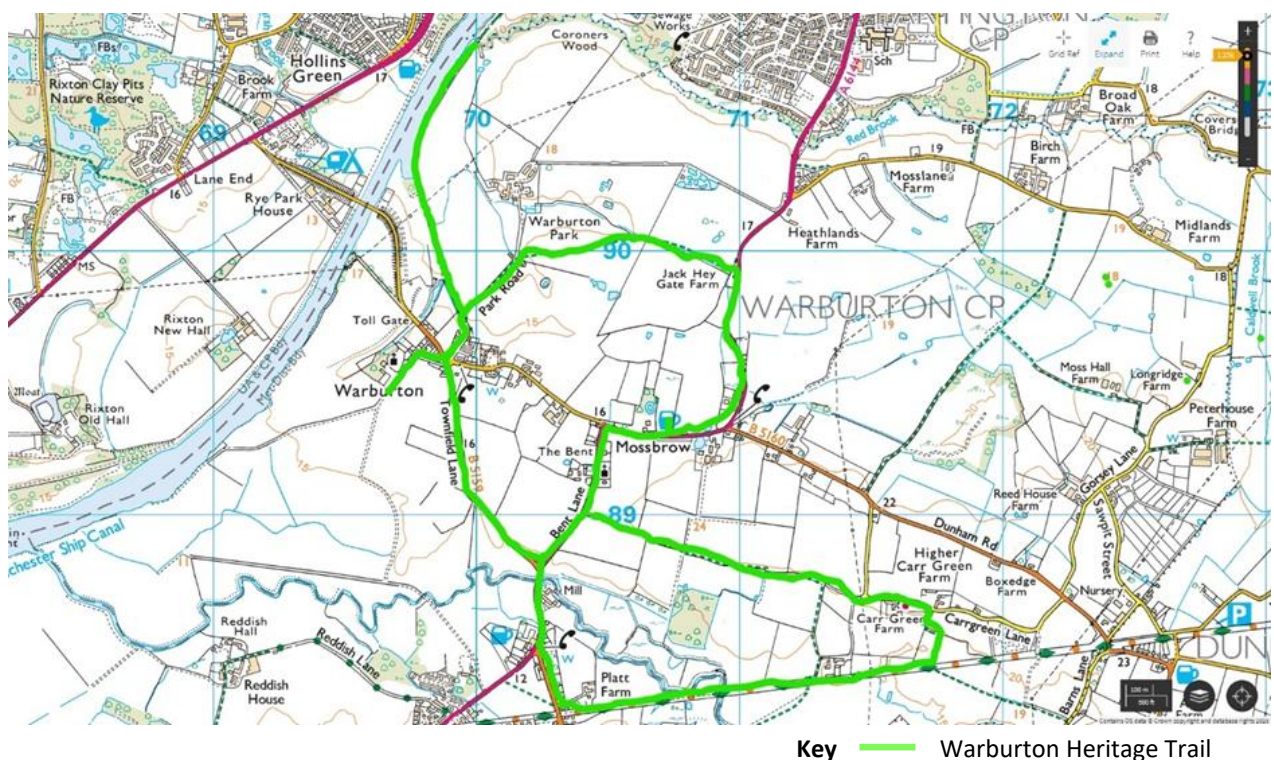

- 5.4.1 Warburton Parish includes a number of Public Rights of Way (PROW) which provide opportunities for informal recreation and leisure activities for both parish residents and visitors from nearby built-up areas.
- 5.4.2 Vehicular access into the Parish is constrained by the Manchester Ship Canal along the boundary to the west and the toll bridge to the north of the Parish. Car parking is limited, and the winding rural lanes are heavily used by traffic at peak times and as a diversion when there are problems on the motorways.
- 5.4.3 However the distinctive quiet rural character of Warburton and its interesting history with the old church, attractive farm buildings and local architecture are a draw to visitors and the public footpaths are well used. Furthermore, the Parish's close proximity to Dunham Massey and Altrincham may offer further opportunities for attracting walkers and cyclists.
- 5.4.4 The Parish includes sections of several long-distance routes. Part of the Trans Pennine Trail (TPT) cuts across the southeast of the Parish along a disused rail line and the Bollin Way links the southwest of the Parish to a track along the eastern edge of the Manchester Ship Canal (also part of the Manchester Ship Canal Walk). There are several other public footpaths crossing the rural area.

Field path

- 5.4.5 These routes will be linked to the local Heritage Trail which is being promoted by the Parish Council to guide walkers around the historic assets of the village.
- 5.4.6 Map 8 shows the integrated route of a Warburton Heritage Trail utilising existing public rights of way that will direct walkers to all the key historical assets of the village. It also links up with rights of way to important surrounding parishes and their assets in Dunham and Partington.
- 5.4.7 Some opportunities for walking and linking existing paths cannot be taken now because roadside pavements have not been maintained, most importantly on Dunham Road which is the main route between Warburton and Dunham and the rest of Trafford to the east. This is a priority for the Parish Council as it also represents significant danger for residents and visitors.

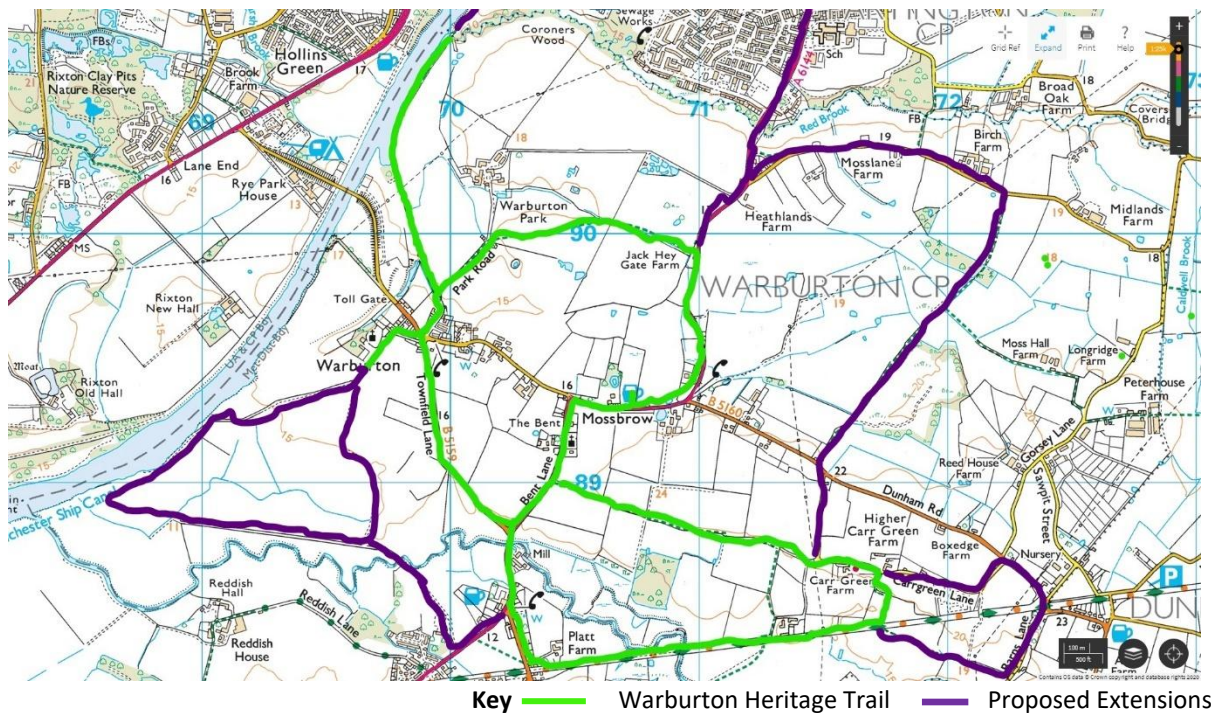

Map 8: Warburton Heritage Trail

@Crown copyright 2022 Ordnance Survey 100055940 on behalf of Warburton Parish Council 0100064955

- 5.4.8 Map 9 adds potential extensions to the existing trail by accessing historical pathways now on private farmland to the west and creating access to the Ship Canal at Bollin Point and some of the best local views. This could be on a limited basis potentially for special occasions. It also shows other more remote paths to access Warburton Moss and the east of the parish and a link to Partington to complete a circuit to the north.

Map 9: Proposed Extensions to Warburton Heritage Trail

@Crown copyright 2022 Ordnance Survey 100055940 on behalf of Warburton Parish Council 0100064955

5.4.9 WNDP Policy W11 Walking and Cycling supports enhancements to the existing walking and cycling network and promotes opportunities for improved connectivity from new developments. These measures will help to promote healthier, more active lifestyles for residents and visitors, reduce reliance on private cars and contribute to a more sustainable and less carbon dependent local transport network. Funding may be made available for the Parish Council to progress some or all of these proposed measures through Community Infrastructure Levy (CIL)¹³.

5.4.10 The policy was supported by 98% of local respondents to the informal consultation on the emerging draft plan.

¹³ See <https://www.trafford.gov.uk/planning/strategic-planning/Other-Supporting-Documents/community-infrastructure-levy.aspx>

Policy W11 Walking and Cycling

Policy W11 Walking and Cycling

Development proposals should have regard to the Movement Pattern Design Principles for Vehicular Network (Section 3.4 Part 3.4.1) and Pedestrian and Cycle Connectivity (Section 3.4 Part 3.4.2) set out in the Warburton Design Guidance and Codes (Appendix 4 of Warburton Neighbourhood Development Plan).

Proposals for new housing and business development should take opportunities to provide safe access to local footpaths, bridleways and cycle routes as identified on Maps 8 and 9 to help support healthier lifestyles, active travel and sustainable transport.

Schemes will be encouraged to support enhancements to existing provision through developer contributions wherever appropriate. Such enhancements include, but are not limited to, the following:

- **Improvement to existing pavements and ongoing maintenance;**
- **New welcoming roadside signage;**
- **A signposted heritage trail;**
- **A celebratory village centre sign;**
- **Reduced speed limits on all major roads;**
- **Improved road markings at the three key junctions of Moss Lane/Warburton Lane, Dunham Road/Warburton Lane and Bent Lane/Paddock Lane; and**
- **Improved access to parking facilities at existing village assets.**

All schemes should be designed to be accessible for all and address the needs of key groups including older people, those with mobility problems and users of mobility scooters, wheelchairs, prams and pushchairs.

Local Green Space and Recreation Facilities

- 5.4.11 Apart from the PROW, Warburton Parish has very limited recreation facilities for local residents and there is no play area for children.
- 5.4.12 LG1 is an area of public open space in Warburton village off Paddock Lane. This is an important open space for local residents and is used for informal recreation. There are a further 2 green areas off Paddock Lane (LGS 3 and 4) which contribute to the local and historic character of this part of the village.
- 5.4.13 Coroner's Wood (LGS 2) is an area of woodland south of Red Brook which is important for wildlife and has historic value.

5.4.14 LGS 5 is an area close to Old Warburton Church which is an important part of the historic building's setting.

5.4.15 The NPPF allows local communities to identify Local Green Spaces for protection provided they meet certain criteria. These criteria are set out in paragraph 106 which advises that the Local Green Space designation should only be used where the green space is:

'a) in reasonably close proximity to the community it serves;

b) demonstrably special to a local community and holds a particular local significance, for example because of its beauty, historic significance, recreational value (including as a playing field), tranquility or richness of its wildlife; and

c) local in character and is not an extensive tract of land.'

5.4.16 Appendix 5 includes tables and photographs to explain how the 5 proposed Local Green Spaces meet the 3 criteria in the NPPF.

5.4.17 NPPF Paragraph 107 sets out that policies for managing development within a Local Green Space should be consistent with those for Green Belts. The area off Paddock Lane is already in the Green Belt. However, Planning Practice Guidance¹⁴ sets out:

'If land is already protected by Green Belt policy, or in London, policy on Metropolitan Open Land, then consideration should be given to whether any additional local benefit would be gained by designation as Local Green Space.

One potential benefit in areas where protection from development is the norm (eg villages included in the green belt) but where there could be exceptions is that the Local Green Space designation could help to identify areas that are of particular importance to the local community.'

Paragraph: 010 Reference ID: 37-010-20140306

Revision date: 06 03 2014

5.4.18 The Parish Council considers that the 5 areas meet the criteria in the NPPF and should be protected as Local Green Space. These are described in Appendix 5 and protected in Policy W12.

5.4.19 The proposals and policy were supported by 100% of respondents who submitted comments to the consultation on the emerging draft plan. There were various ideas for improving local recreational facilities in the areas and these will be considered by the Parish Council as possible future actions, working with landowners.

5.4.20 The proposed Local Green Spaces were publicised on the Parish Council website and landowners invited to comment prior to the Regulation 14 consultation. The boundary of W12/2 Coroner's Wood was amended to include a smaller area in response to comments from Trafford Borough Council submitted during the

¹⁴ <https://www.gov.uk/guidance/open-space-sports-and-recreation-facilities-public-rights-of-way-and-local-green-space>

Regulation 14 consultation and a sentence supporting water management was added in response to comments from United Utilities.

Policy W12 Local Green Space

Policy W12 Local Green Space

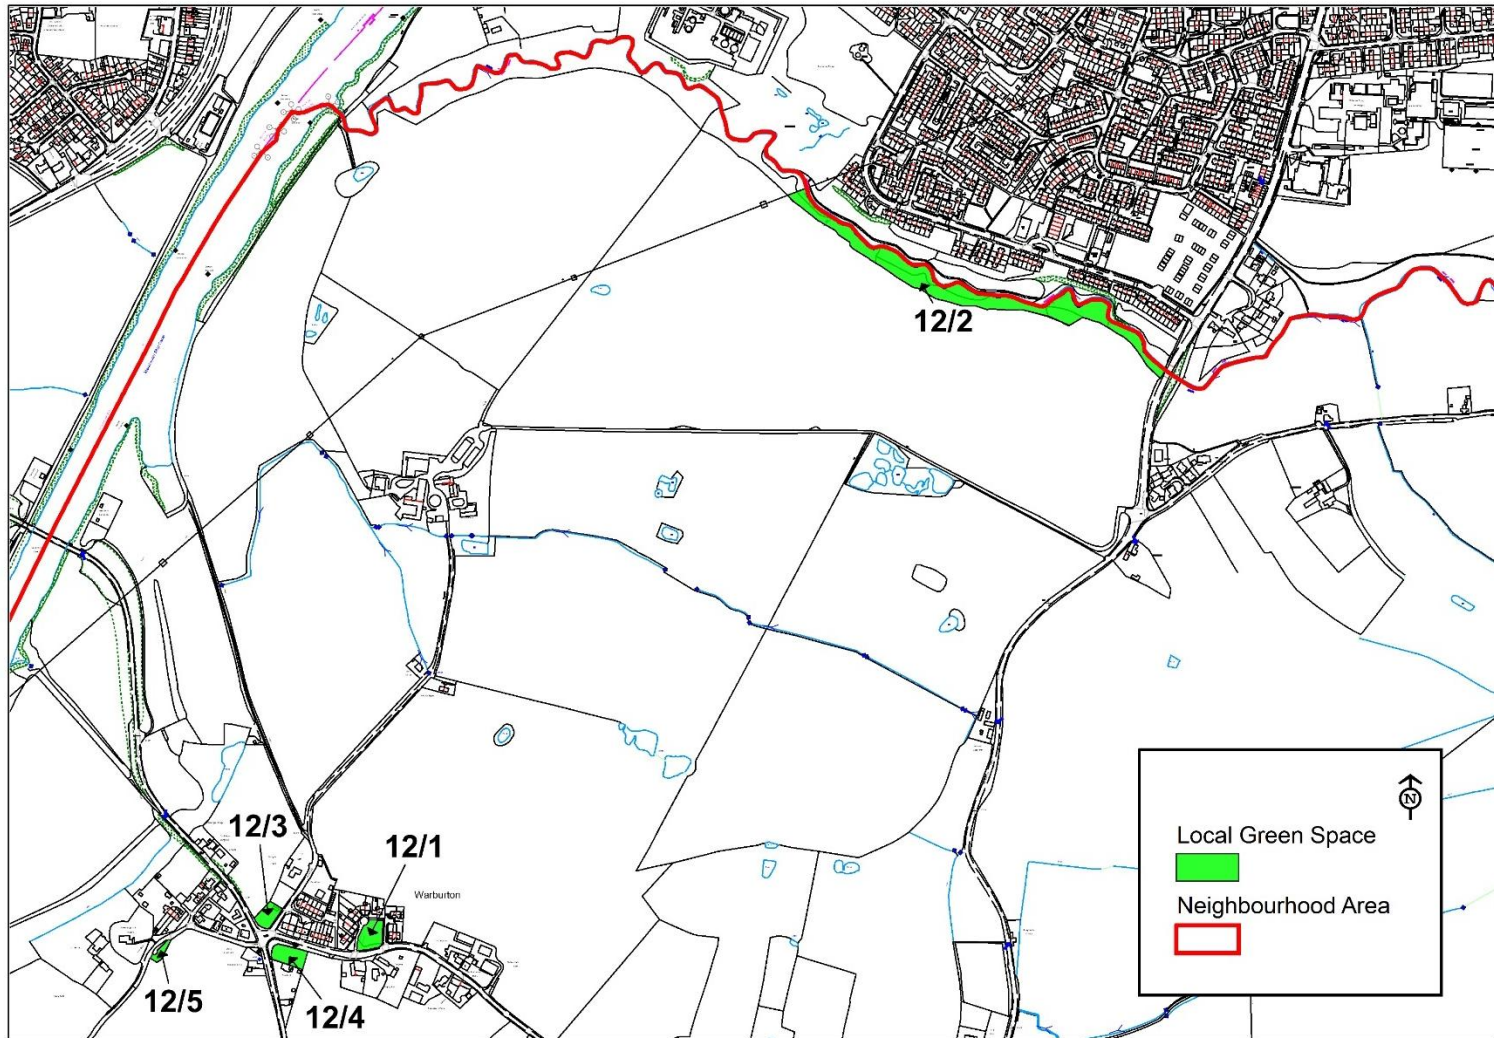

The six areas of land identified on Map 10 Local Green Spaces and the larger scale maps in Appendix 5 are protected as Local Green Spaces. These are:

- **W12/1 ‘The Green’ off Paddock Lane;**
- **W12/2 Part of Coroner’s Wood, Warburton;**
- **W12/3 Land to the east of the Paddock Lane / Townfield Lane junction;**
- **W12/4 Land to the south of the Paddock Lane / Townfield Lane junction; and**
- **W12/5 Land off Wigsey Lane and adjacent to Warburton Old Church.**

Open space improvements to LGS 1 ‘The Green’ off Paddock Lane site such as provision of seating areas, picnic tables and play equipment will be supported, also the provision of footpath links across LGS 2, Part of Coroner’s Wood, Warburton.

Investment in water and wastewater utility infrastructure needed to meet environmental requirements will be supported.

Map 10: Local Green Spaces

Relevant Trafford UDP Policies include:

- Proposal OSR7 – Improvement and Provision of Informal Recreation and Children’s Play Space Provision
- Proposal T18 New Facilities for Cyclists.

5.5 Rural Businesses and Community Facilities

Local farming

Rural Diversification and Energy

- 5.5.1 Warburton has retained its rural character and local employment in the Parish is largely based around farming and food production. The agricultural sector is critical for the future of the village and should be supported to maintain its contribution to the local economy and environmental sustainability.
- 5.5.2 There are several working farms in Warburton that cover many aspects of agriculture. These include:
- R and K V Clegg at Moss Brow Farm, Paddock Lane, Warburton farm the local area and have a seasonal shop.
 - J Priestner and Sons at Midlands Farm and Peterhouse Farm have played a part in Warburton farming for many years. Peter House Farm stocks their produce as well as local shops.
 - H Booth and Son are based on the very edge of the parish at Broadoak Farm and specialise in rare breeds. They produce pigs, cows and sheep and provide farm visits for school children to learn about farming and the environment. Another speciality of theirs is potatoes and they supply local and regional chip shops.
 - E & L Houghton farm at Birch Farm in Warburton and although relatively new to the village have a mixed farming business of arable crops, selling their barley to make Carling Lager, craft beers and also to local whiskey producers Forest Whiskey based at the Cat and Fiddle in Macclesfield. They also grow oil seed

rape, wheat and beans. If you drive past in the summer you'll see their small herd of Aberdeen Angus cattle grazing the fields and this meat is sold to local buyers.

- Cheshire Haybale Hire which hires out hay or straw bales for events.
- A & E Cookson farm Overtown Farm on Paddock Lane in the heart of the village and produce arable crops and beef. They also recently diversified into storage on the farm.
- T Harris has been farming at Lower Carr Green Farm in the village for many years and was known for his beef and sheep production. It is let to a local Dunham farmer R Pennington for farming beef cattle at Lower Carr Green Farm.
- Frank Lythgoe Ltd is a major landowner in the Parish.
- CH Farms based on Dunham Road at Yew Tree Farm are arable farmers and farm the area known as Warburton Moss.
- D & J Priestner are mainly based in Dunham Massey but also farm a large area of land in Warburton and have a smaller farm at Moss Hall Farm on Gorse Lane. This is quite common in small villages and brings Dunham Massey and Warburton close together with a few farmers farming land in the neighbouring village.

5.5.3 Warburton also has Kennels and Catteries based at Reed House Farm and Lighthouse Farm, providing excellent accommodation for pets. Not only small pets are catered for with two livery yards for horse owners to keep their horses on at Matchington Farm on Sawpit Street and also at Reed House Farm on Gorse Lane. These horse owners can take advantage of the local access to the Trans Pennine Trail and ride through our lovely village.

5.5.4 The Warburton NDP aims to support and sustain these rural businesses in the future as they face ongoing challenges related to global changes in food production, a greater emphasis on more sustainable, local food production, and the need to protect and enhance wildlife and biodiversity.

5.5.5 Warburton also has a role in contributing towards the production of sustainable energy resources as part of climate change, energy security and air quality objectives. Large scale renewable energy schemes such as major solar schemes can have an adverse impact on landscape character and the openness of the Green Belt. However smaller scale schemes which contribute towards low or zero carbon objectives could be accommodated in some areas, as part of rural diversification. In addition, there are growing opportunities for community led energy schemes which can provide locally sourced, possibly more affordable energy alternatives for local communities.

5.5.6 Policy W13 provides a supportive planning framework for suitable rural diversification and Policy W14 supports investment in small scale renewable energy schemes. Both policies were supported by most respondents (98% and 100% respectively) and there were comments that the policy should be amended to refer

to services required and the need for more small scale extensions and conversions to support small scale local businesses and those working from home, to support 21st century living.

- 5.5.7 As the rural part of the neighbourhood area is largely in the Green Belt, Green Belt policies will apply in this area.

Policy W13 Rural Diversification

Policy W13 Rural Diversification

Conversions, extensions and well-designed new buildings which provide opportunities for the growth and expansion of rural businesses and homeworking, will be supported where they respect the rural character of the Warburton.

In addition, development proposals should have regard to the following:

- 1. Protection of amenity of neighbours, with regards to noise, odour and outlook;**
- 2. Contribution to biodiversity net gain (see WNDP Policy W3 Protecting and Enhancing Wildlife);**
- 3. Careful siting of new buildings and landscaping schemes to minimise visual and landscape impacts. Larger buildings should be “broken up” via the sensitive use of materials, colour or ridge height;**
- 4. Use of natural materials including wood, and neutral, earth tones in colour schemes to help blend new buildings into their surroundings; and**
- 5. Inclusion of renewable energy and/or resource efficiency measures.**

Policy W14 Energy Proposals

Policy W14 Energy Proposals

Renewable energy or low carbon energy proposals in the rural area of an appropriate scale that demonstrably benefit the community, and respect local character, residential amenity and highway safety will be supported.

Such schemes should avoid the best and most versatile agricultural land.

Community Facilities

Interior of Old Church

- 5.5.8 Local community facilities in the Parish are highly valued and well used by local residents.
- 5.5.9 The new St Werburgh's Church is available for christenings and funerals and has weekly Sunday services. The Parish Rooms are situated next to the new Church on Bent Lane and are used for local social events and meetings as well as PCC and Parish Council meetings.
- 5.5.10 The old St Werburgh's Church and priory is recognised as one of Manchester's key medieval sites. It is also the oldest standing building in Trafford. The churchyard surrounding the old church is the burial ground for the parish. The church is now looked after by the Churches Conservation Trust and there are services during the summer months. There are morning services on Sundays in May and September, and two Evensongs at 6.30pm on the last Sundays in May and July. The Churches Conservation Trust organizes various events through the year. The Parish Council will seek to promote visitors to the church and feature it on the Heritage Trail. It will be included in the heritage promotion on the Parish Council website and in printed material.
- 5.5.11 The Saracens Head is the only pub in Warburton and has a colourful history particularly in 19th century. It offers a large family play and recreational area and extensive parking. It could play a key role in development of the village and become a social centre for larger village activities.

Saracens Head Public House

- 5.5.13 WNDP Policy W15 identifies these local community facilities and protects them for the continues benefit of the local community. The draft policy was supported by 98% of respondents to the consultation on the emerging draft plan.

Policy W15 Community Facilities

Policy W15 Community Facilities

The following community facilities in Warburton are identified on Map 11 Community Facilities.

- 1. The new St Werburgh’s Church and Parish Rooms;**
- 2. The old St Werburgh’s Church; and**
- 3. The Saracen’s Head Public House.**

Proposals involving the loss of any one of these community facilities will not be supported unless they can demonstrate that:

- A. The facility is surplus to the needs of the local community;**
- B. The proposal does not constitute the loss of a service of particular value to the local community nor detrimentally affect the character and vitality of the area;**
- C. The facility is not capable of continued use for the existing purpose and cannot be used for other community uses in an economic and sensitive manner;**
- D. The loss of the land/property forms part of a larger scheme for the development of community facilities serving the needs of the locality; or**
- E. Compensatory facilities of equivalent community benefit are provided within the catchment of the existing facility.**

Appendix 1: Parish Council Actions and Local Aspirations

The Parish Council is responsive to the main concerns and issues of residents and stake holders in Warburton. In preparation for the Neighbourhood Development Plan several forms of public consultation have been undertaken. These have helped to clarify these matters and the Parish Council has formulated actions accordingly that are not within the scope of planning policies in the WNDP.

1. Road Safety

There is great concern about the increasing number of road incidents, including fatalities, mostly occurring at the three main junctions of the village. This is primarily because there are competing road users (cars, trucks, motorcycles and cycles) often showing a disregard for care and speed control in the rural environment of the village. In addition to efforts seeking help from the appropriate local agencies, the Parish Council has resorted to creating its own programme to analyse the problems and find solutions. This is ongoing and will result in recommendations being made to amend the road layout, traffic controls and speed limits.

2. Safe walking and cycling – lack of maintenance of infrastructure

This is becoming an increasingly critical issue for Warburton and is a danger to pedestrians and other road users, particularly cyclists. The lack of maintenance of infrastructure, particularly pavements and hedgerows, and more recently potholes, has led to an increasingly hazardous and unsafe environment. One important element of this problem is lack of safe connectivity between leisure routes, roads and footways in the area, effectively deterring public exploration of some extremely attractive areas of the village.

The Parish Council is also aware of the potential opportunities for the MSC to provide a safe cycle route linking to Manchester and Liverpool and will support this if opportunities for developing a route along the MSC arise.

3. Toll Bridge

The poor condition of the bridge and the issues created by collection of tolls with traffic build up affecting access to resident's homes is ongoing. There is a public inquiry underway, mostly focused on the costs of the toll. The Parish Council is attempting to mitigate the downsides of the inquiry and is facilitating solutions to improve the quality of residents' lives affected by the bridge.

4. Village Identity

The Parish Council believes that lack of awareness about the village of Warburton and its heritage has contributed to the actions of developers and responses from other agencies. There is a very low level of signage for the village and the existing signs are of poor quality. Heritage assets (like the Cross and Old St Werbergs church) are largely invisible to visitors. The Parish Council is developing village branding and new signs will be implemented in key areas.

5. Heritage Trail

In line with improving village identity the Parish Council is planning to promote a network of walking paths so that residents and visitors can explore the historical assets of the village, its wildlife and contribution to biodiversity. This is particularly important given Warburton's proximity to the urban environment of Trafford and Greater Manchester.

This will embrace the existing Trans Pennine Trail and Bollin Valley Way.

Following this an equivalent safe cycling trail will be promoted.

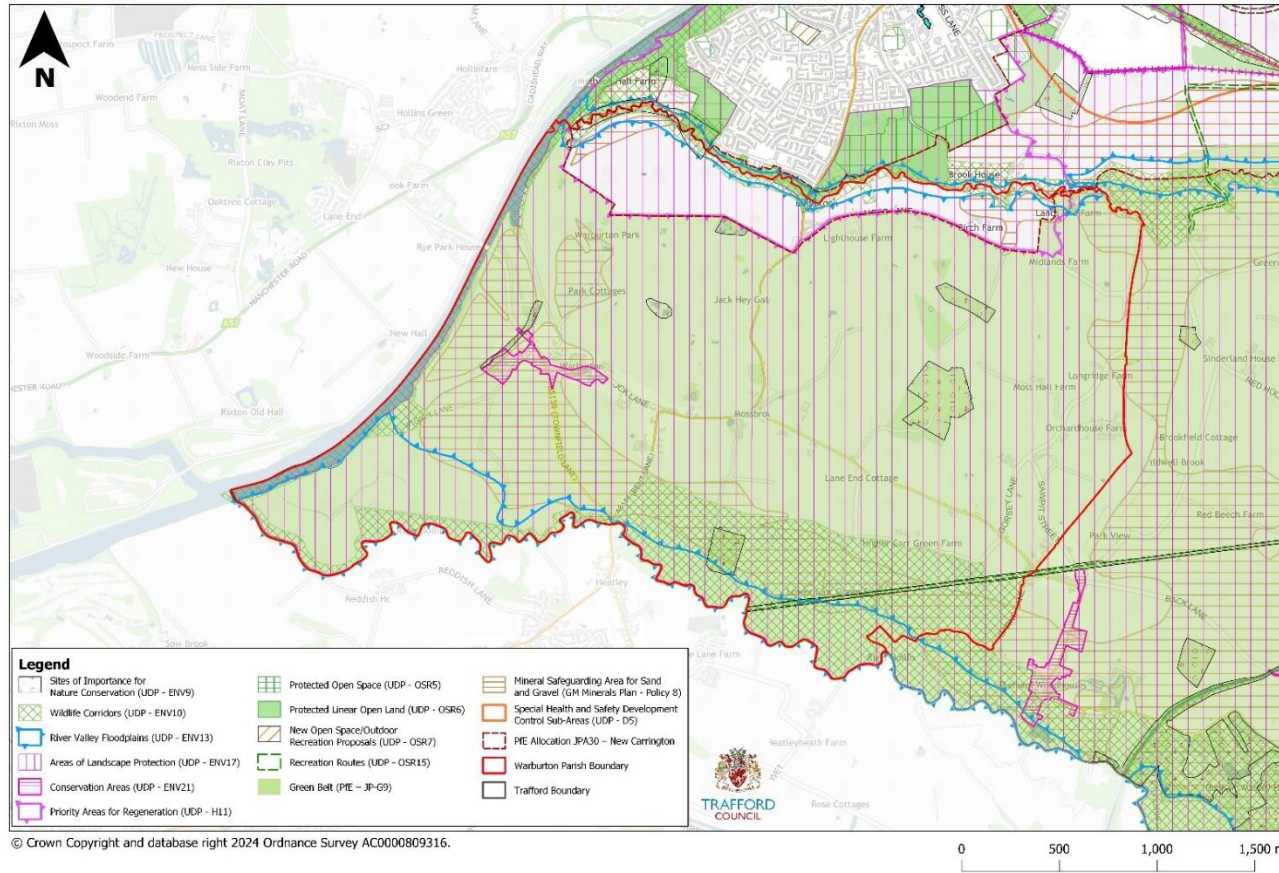

6. Public Transport

The provision of public transport has declined markedly in recent years and a minimal bus service is now available. This has resulted in an increased dependence on car travel with associated environmental downsides.

Even this limited service was suspended for over a year due to a dispute between TfGM, Trafford Council and Warrington Own Buses. This highlights the fragility of the service. The Parish Council will continue to liaise with Trafford and TfGM to improve this transport lifeline for some residents, particularly the elderly and for it to be integrated with other services to local hubs and schools.

- Heritage assets identified in Warburton Conservation Area.

Historic Environment Record (HER)

The HER has a few more sites of potential archaeological interest within the deer park, not necessarily related to the medieval park, but nevertheless 'non-designated heritage assets'. These include a possible barrow site (HER ID 1483.1.0) and 'irregular linear cropmarks NW of Warburton Park' (HER ID 7889.1.0). There are also findspots for a medieval / post-medieval pilgrim badge and an Iron Age saddle quern.

Appendix 5: Local Green Spaces

W12/1 ‘The Green’ off Paddock Lane

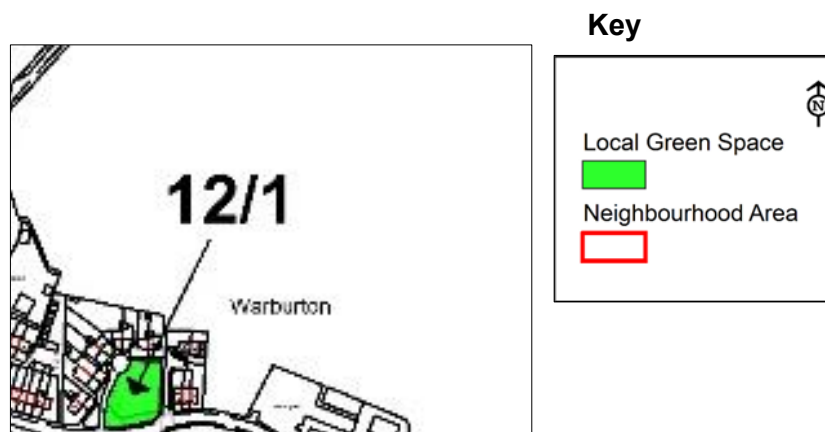

Grid Ref. SJ701896

Description and purpose

This area although not formally designated as a village green is frequently referred to locally as ‘the green’ or ‘the village green’. It is located opposite a recent extension to the Warburton Conservation Area. It has been used for village events for very many years (60 +?).

Justification against criteria in the NPPF (para 106)

a) in reasonably close proximity to the community it serves	It occupies a very central location in the village in what is otherwise a very dispersed community.
b) demonstrably special to a local community and holds a particular local significance, for example because of its beauty, historic significance, recreational value (including as a playing field), tranquillity or richness of its wildlife	<p>The Local Green Space has recreational value.</p> <p>It is the only area which can reasonably be called ‘public open space’ within Warburton, used for informal recreation. It is not designated Public Open Space despite the obvious and repeated public use over many years.</p>
c) local in character and is not an extensive tract of land	‘The Green’ is very much local in character and is relatively small in area.

@Crown copyright 2022 Ordnance Survey 100055940 on behalf of Warburton Parish Council
0100064955

Photographs of LGS W12/1 ‘The Green’ off Paddock Lane

W12/2 Part of Coroner’s Wood, Warburton

Grid Ref. SJ708906

Description and purpose

Coroner’s Wood is a woodland in the valley of Red Brook. Red Brook is the Parish Boundary between Warburton and Partington. Within Partington, a footpath, known as the

Redbrook Wildlife Trail runs through the eastern half of Coroner’s Wood, connecting to Warburton Lane and approximately half-way along the path, to Oak Road. The wood serves both the Partington and Warburton Communities.

Justification against criteria in the NPPF (para 106)

<p>a) in reasonably close proximity to the community it serves</p>	<p>This area is close to housing in Partington and is overlooked by housing along Oak Road.</p>
<p>b) demonstrably special to a local community and holds a particular local significance, for example because of its beauty, historic significance, recreational value (including as a playing field), tranquillity or richness of its wildlife</p>	<p>The Local Green Space has historic significance and rich wildlife value.</p> <p>The Trafford Historic Environment Assessment of 2019 states, ‘Area defined as Ancient or Semi-Natural Woodland along the banks of Red Brook. Shown on first edition Ordnance Survey and also included Osier beds. Possibly remnants of the Warburton Deer Park boundary’.</p> <p>* In fact, the Warburton Deer Park boundary is a major feature of the south side of the Red Brook valley and the artificially ‘scarped’ embankment may easily be seen, extending for a considerable distance along the valley side. A relatively small area to the west of Coroner’s Wood is scheduled as ancient woodland, despite the fact that it is contiguous with the main woodland and that similar ancient woodland indicator species may easily be found in both areas. There is a well-known association between ancient woodland and deer parks and maps appear to support the claim that the whole of Coroner’s Wood is ancient woodland.</p> <p>The majority of the area was used as wood pasture and is noted as ‘pasture’ in the 1838 Tithe Map.</p> <p>The woodland is a place of tranquillity and is much loved by local people in both Partington and Warburton, who often visit to appreciate its beauty and the rich variety of plant and wildlife in the area.</p>

c) local in character and is not an extensive tract of land

This is very much a local area and is not very extensive. It is effectively a narrow strip of land to the south and west of Red Brook. Most importantly, as an area of ancient woodland and with a former deer park boundary on its southern side it is extremely rare and special.

W12/3 Land to the east of the Paddock Lane / Townfield Lane junction

Grid Ref. SJ699896

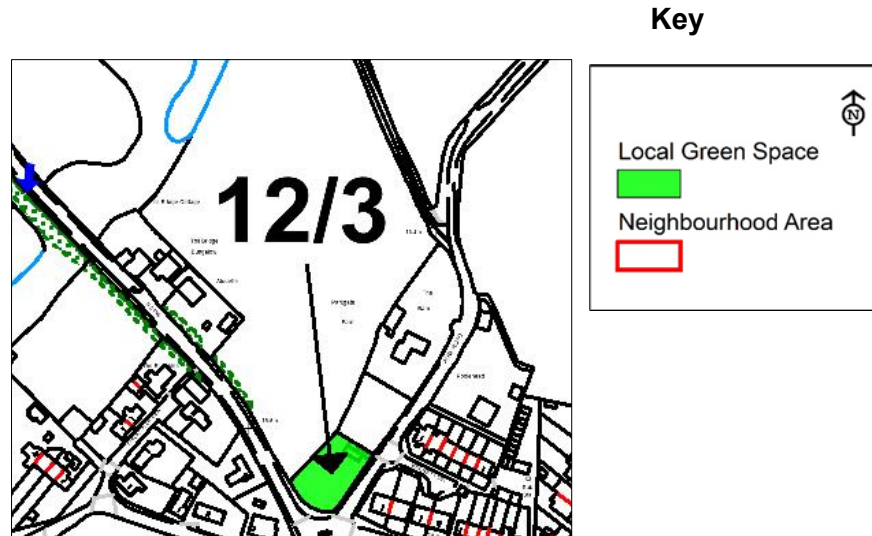

Description and purpose

This area is virtually in the centre of Warburton village and is immediately adjacent to the former location of Warburton Cross and the stocks (now located on the opposite corner, between Wigsey Lane and Townfield Lane).

Justification against criteria in the NPPF (para 106)

<p>a) in reasonably close proximity to the community it serves</p>	<p>It occupies a very central location in the village in what is otherwise a very dispersed community.</p>
<p>b) demonstrably special to a local community and holds a particular local significance, for example because of its beauty, historic significance, recreational value (including as a playing field), tranquillity or richness of its wildlife</p>	<p>The Local Green Space has historic significance as it is located within the Conservation Area. The Conservation Area Management Plan notes: ‘2.6.2 The central crossroads and the open spaces adjoining create an open core with pockets of built areas on either side. The prominent position of this open space is historically important as the location of the village stocks.’ The use of flagstones as boundary treatment is also noted: ‘2.4.2 A characteristic boundary treatment found on Church Green, Wigsey Lane and around the cross base comprises upright local flagstones, which is also characteristic of the wider area.’</p> <p>The Conservation Area Appraisal notes in para 6.3.10: ‘There may be future desire for new development on the large green plots surrounding the crossroads at the centre of the adopted enlarged Conservation Area. These are important green spaces and any modern development here may detract from the historic character of the Conservation Area.’</p> <p>See also Conservation Area Management Plan Map 2 Townscape Analysis.</p> <p>This is a special area, with Cheshire Railings around the site (often used for banners etc). It is not open to public access but is very much in the public view and seen every day by locals and passing traffic.</p> <p>Before the construction of Warburton (Old) Bridge and its associated road, this was part</p>

	of a garden to a shop and house as is shown on the 1838 Tithe Map.
c) local in character and is not an extensive tract of land	Very much local in character and is relatively small in area.

Map 2 Showing 'Open Areas' including Local Green Space W12/4**

W12/5 Land off Wigsey Lane and adjacent to Warburton Old Church

Grid ref: SJ697895

Description and purpose

This is a small area to the side of the lane and off a car parking area south of Warburton Old Church.

The current main parking area was the site of the village pond, long filled in, but still subject to occasional flooding.

Justification against criteria in the NPPF (para 106)

<p>a) in reasonably close proximity to the community it serves</p>	<p>The site is located on the edge of the village in an area with a concentration of listed buildings.</p>
<p>b) demonstrably special to a local community and holds a particular local significance, for example because of its beauty, historic significance, recreational value (including as a playing field), tranquillity or richness of its wildlife</p>	<p>The Local Green Space has historic significance.</p> <p>The site is in within the Conservation Area and forms part of the setting of the Grade I listed Warburton Old Church. The sunken nature of the parking area and the presence of the adjacent ancient church gives a powerful sense of enclosure and tranquillity.</p>
<p>c) local in character and is not an extensive tract of land</p>	<p>This is very much local in character, the essential core of the village.</p>
